Research is the foundation of any activity which gives a definite direction to a project. Presentation of research in the form of publication is an equally important step as conducting research. A prospective, high quality, research if not published on an appropriate platform incurs loss of knowledge to society. Publication of high quality research in a peer reviewed journal is not an ordinary task. For communication in peer reviewed journals, meticulous preparation of manuscript is imperative. Certain experienced and senior faculty members of PCCOE have partially acquired this technique. Yet, in such cases too, acceptance in one go is not guaranteed. The published articles are immensely important in advancing essential knowledge and this workshop is aimed to change the perspective of one's understanding about the domain and improve the quality of life.
