# Pimpri Chinchwad Education Trust's PIMPRI CHINCHWAD COLLEGE OF ENGINEERING SECTOR NO. 26, PRADHIKARAN, NIGDI, PUNE 411044

An Autonomous Institute Approved by AICTE and affiliated to SPPU, Pune

Curriculum Structure and Syllabus
First Year Master of Computer Application
(Course 2023)

Department of Master of Computer Application

(Effective from Academic Year 2023-2024)

#### **Institute Vision**

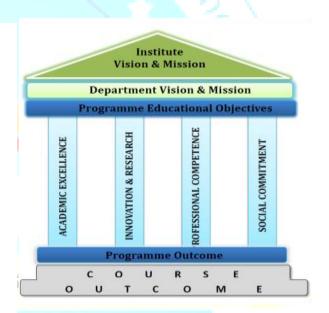

To be one of the top 100 Engineering Institutes of India in coming five years by offering exemplarily Ethical, Sustainable and Value Added Quality Education through a matching ecosystem for building successful careers

#### **Institute Mission**

- 1. Serving the needs of the society at large through establishment of a state-of-art Engineering Institute
- 2. Imparting right Attitude, Skills, Knowledge for self-sustenance through Quality Education
- 3. Creating globally competent and Sensible engineers, researchers and entrepreneurs with an ability to think and act independently in demanding situations

#### **Quality Policy**

We at PCCOE are committed to impart Value Added Education Quality to satisfy the applicable requirements, needs and expectations of the Students and Stakeholders. We shall strive for academic excellence, professional competence and social commitment in fine blend with innovation and research. We shall achieve this by establishing and strengthening state-of- the-art Engineering and Management Institute continual improvement effective through in implementation of Quality Management System.

#### **CURRICULUM FRAMEWORK**

The MCA Program is the based on the following type of course:

SR. NO.	TYPE OF COURSE	ABBREVIATION
1.	Professional Core Course	PCC
2.	Professional Elective Course	PEC
3.	Basic Science Course	BSC
4.	Management Course	MGT
5.	Seminar	SEM
6.	Project	PROJ
7.	MOOC Course	MOOC
8.	Audit Course	AC

#### The Course and Credit Distribution is as under

Sr. No.	Type of Course	Number of Courses	Total Credit	Credit Per (%)
1	Professional Core Course	11	36	37.5
2	Management	2	6	6.25
3	Basic Science (Math)	2	8	8.33
4	Professional Elective Course	4	12	12.5
5	Professional Core Course Lab	rings Free	6	6.25
6	Professional Elective Course Lab	4	4	4.17
7	Project	3	20	20.83
8	Seminar	Eventiones	2	2.08
9	MOOC	1	2	2.08
10	Audit Course	2	0	0
	Total	36	96	100

		A STATE OF THE PARTY OF THE PAR	ad.	TW	OR	PR	Total	
		-1114		- 1		11,-, ~		

#### **Prerequisites**

- Computer Fundamentals
- Basics Concepts of Programming

#### **Objectives**

- To learn why Java is useful for the design of desktop and web applications.
- To learn how to implement object-oriented designs and identify Java language components and how they work together in applications.
- To learn about the concepts and principles of Java programming.
- To develop applications using object-oriented programming concepts of Java.
- To develop GUI applications using Swing and Applet programming

#### **Outcomes**

At the end of the course, students will be able to:

- Describe different concepts such as Programming Constructs, Multithreading, OOPs, File Handling, Collections, GUI using Java Programming.
- Implement different concepts of object-oriented programming.
- Implement Annotations, Lambda Expression using Java Programming.
- Perform different operations related to file handling, multithreading using Java Programming.
  Use different classes and interfaces from Collection Framework.
- Build user interfaces using Swing, Applets.

	Detailed Syllabus						
Unit No.	Unit Name and Contents of the Unit	Duration (in Hrs.)					
1	Introduction to Java & Programming Concepts						
	1.1 History of Java	5					
	1.2 Features of Java						

	1ADV DE HAI	
	1.3 JDK vs JRE vs JVM	
	1.4 Basic syntax and language constructs	
	1.4.1 Identifiers, Keywords, Variables,	
	1.4.2 Control Structure, Decision Making Statements,	
	1.4.3 Arrays & Strings (String, StringBuffer class)	
2	Object-Oriented Programming in Java	
	2.1 Classes and Objects

		And the second	A	TW	OR	PR	Total
		100	I Chr.		4.0	111-	-

#### **Prerequisites**

- Basic knowledge of Set Theory and Relations
- Software Engineering

#### **Objectives**

• The course aims at providing the students insight on basic DBMS fundamentals principles and practices. Students will further learn RDBMS concepts and implement its operations for database creation and manipulation through SQL and PL/SQL.

#### Outcomes

At the end of the course, students will be able to:

- Analyze the problem of a real-life situation and draw the ER Diagram
- Analyse a database specification for designing database schema applying normalization techniques to ensure data integrity
- Create a functional database and use SQL queries to retrieve, modify and analyze data stored in the database
- Use PL/SQL to create stored procedures, functions, triggers and cursor for efficient data processing and retrieval
- Apply transaction and concurrency control techniques to ensure consistency, isolation, and durability of data

	Detailed Syllabus						
Unit No.	Unit Name and Contents of the Unit	Duration (in Hrs.)					
1	Introduction to Conceptual Data Model	8					
1	Conceptual Data Modeling, Motivation behind Conceptual						
	Data Modeling, Entity-Relationship (E/R) Diagrams:						
	Components of E/R Diagrams, Basic Symbols and						
	Notations in E/R Diagrams, Entities and Entity Types,						
	Attributes and Various Types of Attributes, Relationships						
	and Relationship Types.						
	Simon and 9						

	Case Studies based on real-world scenarios to analyse the	
	requirements and Draw ERD.	
2	Relational Data Model & Normalization	8
	Basic concepts of the Relational Data Model, Codd's rules, Type	
	of keys, Referential Integrity, Mapping ER model to Relational	
	form, Concept of Normalization, First Normal Form, Second	
	Normal Form, Third Normal Form and Functional Dependency.	
	Con Con	
	Case Study: Convert ERD of Unit 1 to Relational Database and	The state of the s
	apply Normalization.	. ^
3	Introduction to SQL	8
3	Overview of SQL Commands and their usage: DDL, DML and	\ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \
/ /	DCL. Basic Data Types, Constraints, Conditional Retrieval of	(A)
	Rows, Working with Null Values, Matching a Pattern from a	1 8

Optimism Excellence

**Software Engineering** 

				. 0			
Program: MCA (First Year) Semester: I							
Course:	rse: Software Engineering				ICA21	404	
Teaching Scheme			<b>Evaluation Scheme</b>				
Lecture	Practical	Tutorial / Activity	Credit	IE1 IE2 ETE To			Total
3	-	1	4	20	30	50	100
					Evalu	ation Scheme	2
		1 WW	Tr.	TW	OR	PR	Total
		ACVIII.		-	140	7	-

#### Pre-requisite:

- Knowledge any programming language.
- Excellent communication skills will be an added advantage.
- DBMS

#### **Objectives:**

- 1. To impart concepts of study on the theories, processes, methods, and techniques of software.
- 2. Students learn & understand the Requirement analysis and system Design.
- 3. Learn the software design principles to develop software in object oriented approach.
- 4. To know how to gather requirements for software.
- 5. To get acquainted with the agile software development methodology.

#### **Outcomes:**

After learning the course, the students should be able to:

- 1. Know the fundamental of software development life cycle with current trends in the area of Software Engineering
- 2. Describe principles of agile development
- 3. Design software requirements specification solution for a given problem definitions of a Software system
- 4. Apply an object-oriented software design and development techniques
- 5. Determine an appropriate and effective graphical user interface

#### **Detailed Syllabus:**

Unit	<b>Description</b>	Duration
1		
	Introduction to Object oriented Software Engineering:	
	1.1 The Evolving Role of Software,	7
	1.2 The Linear Sequential Model, Prototyping Model, RAD Model, Spiral	/
	Model, Introduction to development approach SSAD and OOAD,	
	1.4 Software Crisis: Problem and Causes	

2 Agile Development Process: 2.1 Agile Development: Agile manifesto, agility and cost of change, 2.2 Agility principles, myth of planned Development Toolset for the agile process, Extreme Programming, SCRUM, Crystal, Kanban, Feature Driven Development, Adaptive Software Development  3 Requirement Engineering 3.1 Concepts of Business Requirement Document (BRD) 3.2 Functional Requirement Document (FRD) 3.3 Types of Requirements Prunctional and Non functional 3.4 Four Phases of Requirement Engineering (elicitation, specification, validation, negotiation,) 3.5 Prioritizing requirements (Kano diagram) 3.6 IEEE standard format Structure and contents of SRS Case study solution on SRS  4 Unified Modeling Language (UML) 4.1 Structural Modeling: Class Diagram and Object diagram 4.2 Associations and links Aggregation , 4.3 Composition and containment Inheritance, 4.4 Deployment Diagram 4.5 Behavioral Modeling: Use case Diagram Develop use-case Model, 4.6 Description of Use case Diagram 4.7 Activity Diagram 4.8 Sequence diagram, 4.9 State Transition Diagram Case study on all above diagrams  5. Software Design: 5.1 System design principles: Ge Brings Freedom* 5.2 levels of abstraction (architectural and detailed design) 5.3 Design patterns. 5.4 User Interface Design 5.5 Elements of good design 5.6 Eight golden rules for design 5.7 Features of modern GUI, Menus, 5.8 Scroll bars, windows, buttons, icons, panels, error messages etc. Case study on User Interface Design				
2.1 Agile Development: Agile manifesto, agility and cost of change, 2.2 Agility principles, myth of planned Development Toolset for the agile process, Extreme Programming, SCRUM, Crystal, Kanban, Feature Driven Development, Adaptive Software Development  3 Requirement Engineering 3.1 Concepts of Business Requirement Document (BRD) 3.2 Functional Requirement Document (FRD) 3.3 Types of Requirements – Functional and Non functional 3.4 Four Phases of Requirements (Engineering (elicitation, specification, validation, negotiation,) 3.5 Prioritizing requirements (Kano diagram) 3.6 IEEE standard format Structure and contents of SRS Case study solution on SRS  4 Unified Modeling Language (UML) 4.1 Structural Modeling: Class Diagram and Object diagram 4.2 Associations and links Aggregation, 4.3 Composition and containment Inheritance, 4.4 Deployment Diagram 4.5 Behavioral Modeling: Use case Diagram Develop use-case Model, 4.6 Description of Use case Diagram 4.7 Activity Diagram 4.8 Sequence diagram, 4.9 State Transition Diagram Case study on all above diagrams  5. Software Design: 5.1 System design principles: De Brings Freedom* 5.2 levels of abstraction (architectural and detailed design) 5.3 Design patterns. 5.4 User Interface Design 5.5 Elements of good design 5.6 Eight golden rules for design 5.7 Features of modern GUI, Menus, 5.8 Scroll bars, windows, buttons, icons, panels, error messages etc.

#### **Pre-requisite:**

Basic Mathematics

#### **Objectives:**

- To recognize the mathematical underpinnings of probability.
- To study decisions about likelihood of events, based on a pattern of collected data.
- To recognize and understand probability distribution functions.

#### **Outcomes:**

#### After learning the course, the students should be able to:

- Use probability theory to solve permutation and combination problems.
- Apply the Addition Rule and the Principle of Inclusion and Exclusion and Dearrangements.
- Implement the concept of Conditional Probability and probability.
- Recognize the discrete probability distribution and apply it appropriately.
- Recognize the continuous and normal probability distribution and apply it appropriately.

#### **Detailed Syllabus:**

Unit	Description	Duration
1.	Counting Principle	
	<ul><li>1.1 Addition and Multiplication Principles</li><li>1.2 Permutations of n Objects, Circular Permutation</li><li>1.3 Permutation with repetitions.</li></ul>	7
2.	Principle of Inclusion and Exclusion: 2.1 Principle of Inclusion and Exclusion theorem and applications. 2.2 Dearrangement theorem and its applications 2.3 Non negative integer value solution 2.4 Multinomial Theorem and application.	7
3	Probability 3.1 Trail, Events, Sample spaces, probability axioms 3.2 Independent and Dependent Events	6

	3.3 Conditional probability and its applications.	
	3.4 Bayes's Theorem and its applications.	
4.	Random variables and Mathematical Expectation	
	4.1 Random Variable (Discrete and continuous),	
	4.2 Probability Distribution of a Random Variable, Probability Mass Function,	
	Probability Density Function, Distribution Function.	9
	4.3 Mathematical Expectation of Probability Distribution, Theorems,	9
	Calculation of Mean and Variance using Mathematical Expectation	
	4.4 Concepts of Bivariate Random Variable, Discrete and Continuous	
	Bivariate Random Variable.	
5.	Discrete Probability Distribution	
	5.1 Binomial Distribution	
	5.2 Finding Mean and variance of Binomial Distribution	8
	5.3 Poisson Distribution	0
1	5.4 Finding Mean and variance of Poisson Distribution	2. \
	5.5 Numerical base on Binomial Distribution and Poisson Distribution	$\sim$
6.	Continuous Probability Distribution	S4. 1
10	6.1 Uniform Distribution	1 50 1
V . ~	6.2 Finding Mean and variance of uniform Distribution	8
1 0	6.3 Normal Distribution	
	6.4 Numerical base on Uniform Distribution and Normal Distribution	0.0
	TOTAL	45

#### **Text Books:**

- 1. Probability and Combinatorics by D.P Apte.
- 2. Fundamentals of Mathematical Statistics by S. C. Gupta and V. K. Kapoor

#### **Reference Books:**

- 1. Anderson, Sweeney and Williams Statistics for Business and Economics
- 2. Discrete Mathematics by Rosen
- 3. Basic. Econometrics. Fifth Edition. Damodar N. Gujarati. Professor Emeritus of Economics,. United States Military Academy, West Point
- 4. The Theory and Practice of Econometrics, George G. Judge, William E. Griffiths, R. Carter Hill, Helmut Lütkepohl, Tsoung-Chao Lee Wiley.
- 5. Statistical Methods by S. P. Gupta.
- 6. Fundamentals of Mathematical Statistics by S. C. Gupta and V. K. Kapoor

3	-	1	4	<b>20</b>	30	50		
				Eval	luation Sch	eme		
				TW	OR	PR		
		Ward.	AGO.	- Co	11	-		

#### **Prerequisites**

• Computer Fundamentals

#### **Objectives**

- To understand fundamentals of computer network, network architectures, and internet.
- To understand the features and operations of computer networking protocols.
- To demonstrate the IP addressing scheme.
- To understand the computer network security and cryptography.

#### Outcomes

At the end of the course, students will be able to:

- Explain the basic computer network technology.
- Identify the features and operations of various application layer protocols.
- Analyse connection-oriented and connection-less computer network services.
- Evaluate IP addressing scheme and implement sub-netting mechanisms.
- Evaluate computer network error detection and correction techniques.
- Analyse security in computer networks with respect to cryptographic services.

	Detailed Syllabus	
Unit No.	Unit Name and Contents of the Unit	<b>Duration (in Hrs.)</b>
1	Computer Networks and the Internet  1.1 What Is the Internet? A Services Description, Protocol.	
	<ul> <li>1.2 The Network Core, Packet Switching and Circuit Switching,</li> <li>1.3 Protocol Layers and Their Service Models</li> <li>1.4 Layered Architecture – OSI Reference Model</li> </ul>	<b>1</b> 7 6
	1.5 TCP/IP Protocol Suite	
2	Application Layer  2.1 Network Application Architectures,  2.2 Application-Layer Protocols,  2.3 The Web and HTTP, Non-Persistent and Persistent Connections,  HTTP Message Format  2.4 Electronic Mail in the Internet, SMTP, Comparison with HTTP,  Mail Access Protocols  2.5 DNS: Services Provided by DNS, How DNS Works?	8

3	Transport Layer	
	3.1 Transport-Layer Services, Transport Layer in the Internet	
	3.2 Multiplexing and Demultiplexing at Transport Layer	8
	3.3 Connectionless Transport: UDP, UDP Segment Structure	
	3.4 Connection-Oriented Transport: TCP, TCP Segment Structure	
4	The Network Layer	
	4.1 Network Service Models	
	4.2 Virtual Circuit and Datagram Networks	
	4.3 The Internet Protocol (IP): IPv4 Format, Addressing, Sub-netting	
	and Numerical Exercises	
	4.4. IPv6: Next Generation IP.	12
	4.5 Routing Algorithms	12
	4.5.1 The Link-State (LS) Routing Algorithm	
	4.5.2 The Distance-Vector (DV) Routing Algorithm	0~/
/	4.5.3 Intra-AS Routing in the Internet: RIP	- X
	4.5.4 Intra-AS Routing in the Internet: OSPF	
/ 2	4.5.5 Inter-AS Routing: BGP	
5	The Link Layer: Links, Access Networks, and LANs	
1 25	5.1 Introduction to the Link Layer	
1/84	5.1.1 The Services Provided by the Link Layer	
1 00 1	5.2 Error-Detection and-Correction Techniques, Numerical Exercises	1 0 1
1 20	5.2.1 Parity Checks	7
h- /	5.2.2 Checksumming Methods	
Lu l	5.2.3 Cyclic Redundancy Check (CRC)	
	5.2.4. Backward Error Correction: ARQ	
-	5.2.5. Forward Error Correction: Hamming Code	
	5.3 Link Layer Protocol: HDLC and PPP	
6	Security in Computer Networks	
	6.1 What Is Network Security?	
	6.2 Principles of Cryptography	4
	6.3.Symmetric Key Cryptography	7
	6.4. Asymmetric Key Cryptography	
	6.5. Encryption Algorithms and examples.	23.77
	TOTAL	45
T . T		

#### **Text Books**

- Computer Networking, A Top-Down Approach Featuring the Internet, James F. Kurose, Keith W. Ross, Pearson Edu., 8<sup>th</sup> Edition.
- Network Security Essentials William Stallings, 4th Edition, Pearson Education, Asia

#### Reference Books

- Data Communications and Networking, Behrouz A. Forouzan, TMH, 6<sup>th</sup> Edition.

#### **List of Tutorials / Activities:**

- Study of basic network commands and network configuration commands
- Study of basic network topologies
- Setup of two or more computers via LAN for sharing resources
- Demonstration of IP addressing scheme and sub-netting
- Demonstration of Cisco Packet Tracer Simulation Tool with Examples
- Demonstration of VMware Virtualization Tool

Java Programming Lab

<b>Program</b> :	Program: MCA (First Year) Semester: I								
Course:	Java Pro	gramming I	Lab		Co	de: MCA21	406		
	Teaching	Scheme				Evaluatio	n Scheme	,	
Lecture	Practical	Tutorial	Credit	1	CE	MTE	ETE	Total	
_	2		1			-	-	-	
		- W	VOV.	<b>Evaluation Scheme</b>				;	
		ACAT.			TW	OR	PR	Total	
	/~				25	-	96	25	

#### **Pre-requisite:**

- 1. Computer Fundamentals
- 2. Basics Concepts of Programming

#### **Objectives:**

- 1. To learn why Java is useful for the design of desktop and web applications.
- 2. To learn how to implement object-oriented designs and identify Java language components and how they work together in applications.
- 3. To learn about the concepts and principles of Java programming.
- 4. To develop applications using object-oriented programming concepts of Java.
- 5. To develop GUI applications using Swing and Applet programming

#### **Outcomes:**

- Describe different concepts such as Programming Constructs, Multithreading, OOPs, File Handling, Collections, GUI using Java Programming.
- Implement different concepts of object-oriented programming.
- Implement Annotations, Lambda Expression using Java Programming.
- Perform different operations related to file handling, multithreading using Java Programming.
- Use different classes and interfaces from Collection Framework.
- Build user interfaces using Swing, Applets.

#### **Detailed Syllabus:**

Unit	Description	Duration
1.	Introduction to Java & Programming Concepts	
	Assignments based on Control Structres, Arrays, Strings and String  Defferer	4
	Buffers.	
2.	Object-Oriented Programming in Java	
	<ul> <li>Assignments based on Constructors, Inheritance, Polymorphism,</li> </ul>	6
	Encapsulations, Abstraction and Exception Handling.	

3.	Advanced Java Programming Constructs	
	<ul> <li>Assignments based on Interface, Packages, Generics, Lambda</li> </ul>	6
	Expressions.	
4.	Java Input / Output & Multithreading	6
	<ul> <li>Assignments based on File Handling and Multithreading.</li> </ul>	O
5.	Java Collection Framework	4
	<ul> <li>Assignments based on Collection Framework.</li> </ul>	4
6.	Java Swing and Applet Programming	4
	<ul> <li>Assignments based on Swing and applets</li> </ul>	4
	TOTAL	30

#### **Pre-requisite:**

Knowledge of Set Theory and Relations.

#### **Objectives:**

To develop database handling, data manipulation and data processing skills through SQL and PL/SQL which will help students to develop data centric computer applications.

#### **Outcomes:**

After learning the course, the students should be able to:

- 1. Use SQL commands related to database creation and manipulation.
- 2. Use SQL operators, Built-in functions, Subqueries on database to access data as per need of user's requirement.
- 3. Handle database using PL/SQL and issues related to data access

# **Pre-requisite:**

1. Programming Fundamentals

### **Objectives:**

- 1. To impart the basic concepts of data structure and algorithms
- 2. To understand concepts about searching and sorting techniques
- 3. To solve problems using data structures such as stacks, queues, lists, trees and graphs.

# Outcomes: After learning the course, the students should be able to:

- 1. Understand different data structures, their types and operations on data structures
- 2. Demonstrate searching and sorting algorithms
- 3. Apply linear data structures for the given problem
- 4. Implement non-linear data structures for the given problem

Detail	ed Syllabus	4
Unit	Description	Duration
1.	Introduction to Data Structure	
	1.1 Fundamentals of Data Structure	
	1.2 Arrays as Data Structure	
	1.3 Searching	o
	1.4 Sorting TOWIEdge Brings Freedom"	8
	1.5 Sparse Matrix	
	1.6 Time Complexity, Space Complexity, Big-O Notation, Omega Notation,	
	Theta Notation	
2.	Stacks	
	2.1 Introduction and Definition, Representation	
	2.2 Operations on Stacks	7
	2.3 Applications of Stacks, Representation of Arithmetic Expressions: Infix,	
	Postfix, Prefix.	

3.	Queues	
	3.1 Introduction and Definition, Representation	
	3.2 Operation on Queues	4
	3.3 Types of Queues, Dequeue, Circular Queue, Priority Queue	
	3.4 Applications of Queue.	
4.	Linked List	
	4.1 Introduction to Linked List	
	4.2 Dynamic Memory Management	
	4.3 Representation of Linked List	10
	4.4 Operations on Linked List, Inserting, Removing, Searching, Sorting,	
	Merging Nodes	
	4.5 Double Linked List	
5.	Trees	N.
	5.1 Introduction to Tree	N.
	5.2 Binary Tree and their types, Representation of Binary Tree	2. \
/	5.3 Operations on Binary Tree	$\sim 1$

Pre-requisite: DBMS, Data Structure

# **Objectives:**

- 1. To understand fundamental concepts, techniques and design principles of data warehousing and data mining
- 2. To enable students to understand, implement and evaluate various algorithms in data mining

Outcomes: After completion of this course, the students would be able to

- 1. Apply different preprocessing methods to prepare data in the desired format
- 2. Use multidimensional schema modeling techniques to organize and structure complex data for efficient analysis
- 3. Evaluate frequent patterns using Association Mining Techniques on large dataset
- 4. Evaluate various Classification Techniques on large dataset
- 5. Evaluate various Clustering Techniques on large dataset

<b>Detailed Syllabus:</b>	Detai	iled	Syl	la	bus:
---------------------------	-------	------	-----	----	------

Unit	Description	Duration
1	Data Pre-processing:  Data Objects, attribute types, descriptions of data, Measuring Data Similarity and Dissimilarity on binary, numerical and mixed dataset. Data	6

	Pre-processing- Data cleaning, Data Integration, data reduction and Data Transformation.  Practice with weka./Tanagra /Orange tool for data preprocessing	
2	Data Warehouse Fundamentals:  Define Data Warehouse, OLTP Systems; Differences between OLTP Systems and Data Warehouse, Architecture of Data warehouse, Characteristics of Data Warehouse, Top-Down and Bottom-Up Development Methodology. Applications of Data Warehouse.	6
3	Dimensional Modeling: Dimensional Modeling: E-R Modeling Vs Dimensional Modeling, Data Warehouse Schemas: Star Schema, Snowflake Schema, and Fact Constellation Schema. OLAP and operations on Multidimensional Database: Rollup, Roll down, Dice, Slice and Pivot.	8
PCETES /	Introduction to Data Mining and Association Rules Concept of Data Mining, Predictive & Descriptive Mining, KDD, Architecture for Data Mining. Applications of Data Mining. Define Association Rule, Representations of Items for Association Mining, Metrics to Evaluate the Strength of Association Rules: Support, Confidence Apriori Algorithm and Frequent-pattern Tree Algorithm to find frequent item set and strong association rules.	Ne ering
5	Classification: Introductions to classification and Prediction, Types of Classification, Input and Output Attributes, Guidelines for Size and Quality of the Training Dataset. Building Decision Tree using Gini Index Method, Naïve Bayes Classification, k-Nearest-Neighbor Classifiers (Lazy Learners), A case study to classify a sample data set.	8

6	Clustering:	
	Introduction to Cluster Analysis, Applications of Cluster Analysis,	
	Desired Features of Clustering, and Distance Metrics: Euclidean distance,	
	Manhattan distance and Chebyshev distance. Major Clustering	
	Methods/Algorithms-Partition Clustering: k-means clustering, Issues	
	with the k-means algorithm, Hierarchical clustering: Agglomerative	10
	clustering and Divisive clustering, <b>Density-Based Methods</b> : DBSCAN	
	Algorithm, Strengths and Weakness of DBSCAN Algorithm, Outlier	
	Analysis	
	A case study on finding efficient Clusters on sample data set.

**Software Testing and Quality Assurance** 

Program:	Program: MCA (First Year)			Semester: II			
Course:	Course: Software Testing and Quality			<b>Code: MCA22504</b>			
Assurance							
Teaching Scheme			<b>Evaluation Scheme</b>				
Lecture	Practical	Tutorial	Credit	CE	MTE	ETE	Total
3	-		3	20	30	50	100
		A STATE OF THE PARTY OF THE PAR	000	<b>Evaluation Scheme</b>			
	-			TW	OR	PR	Total
	1	W.				0_	No.

# **Pre-requisite:**

- 1. Basic concepts of programming language and database concepts.
- 2. Basic knowledge of software engineering and project life cycle.

### **Objectives:**

- 3. To understand the principles of software quality assurance.
- 4. To learn fundamental concepts in software testing & testing levels.
- 5. To understand test design techniques based on software functionality & its structure.
- 6. To understand test planning, monitoring and controlling process.

#### **Outcomes:**

After learning the course, the students should be able to

- 1. Describe different quality factors in software
- 2. Explain concept of software testing
- 3. Explain different software testing levels
- 4. Demonstrate the test cases based on the testing levels
- 5. Use the testing design techniques for preparing test cases
- 6. Appraise test plan based on the requirements

Detailed	l Syllabus	
Unit No	Unit Name and Contents of the Unit	Duration( in Hrs.)

		I
1.	Software Quality Assurance Fundamentals:	
	1.1 Definition of Quality, Quality Assurance, Quality Control,	
	1.2 Difference between QA and QC,	5
	1.3 Software Quality Assurance, SQA Planning & Standards	
	1.4 Building Blocks of SQA	
	1.5 Software Quality Metrics: Process Metrics & Product Metrics	
2.	Overview of Software Testing	
	2.1Review of software development models	
	(W Model, V Model)

# Advanced Java

Program: MCA (First Year)			Semester	: II			
Course: Advanced Java				Code: MCA22509			
Teaching Scheme				<b>Evaluation Scheme</b>			eme
Lecture	Practical	Tutorial	Credit	<b>Evaluation Scheme</b>			eme
3	-	-	3	IE1	IE2	ETE	Total
				20 30 50 100			
			id0	<b>Evaluation Scheme</b>			
		-1114		TW	OR	PR	Total

## **Prerequisites**

- Computer Fundamentals
- Basics Concepts of Programming
- Java Programming
- Basics of Web Development

## **Objectives**

- To Develop a solid understanding of SQL and database design principles
- Develop expertise in web application development using Java Servlets and Java Server Pages (JSP), including understanding web servers, HTTP protocol, and managing sessions.
- Gain an understanding of Object Relational Mapping (ORM) concepts and their benefits in Java development, including the basics of Hibernate as an ORM tool and its integration with Java
- Develop proficiency in Hibernate framework, including the configuration of Hibernate in a Java application, Object Relational Mapping (ORM) using Hibernate annotations, and Hibernate Query Language (HQL) for efficient database access.

#### **Outcomes**

- Understand the concepts of JDBC, Servlet, JSP.
- Apply JDBC for database management.
- Build Dynamic Web Pages using Servlet.
- Build Dynamic Web Pages using JSP.
- Understand Hibernate ORM, HQL.
- Apply Hibernate for database management.

# **Prerequisites**

- Basics of Python Programming
- Basics of Business Statistics

## **Objectives**

- To develop relevant Python programming abilities for analysis of data.
- To learn and demonstrate the basic statistical analysis of data.
- To understand the features and applications of machine learning algorithms.
- To use appropriate tools and methods to collect, process, summarize, and visualize data for analysis.

## **Outcomes**

- Apply python programming data structures and control structures for data analysis
- Apply basic statistical operations using python programming libraries on datasets.
- Analyse and implement data visualization techniques for data analysis
- Analyse and implement basic data cleaning techniques to prepare data for analysis
- Evaluate appropriate machine learning algorithms for data analysis and visualization

	100			_		_	40	1	

#### **Pre-requisite:**

- Basic Mathematics
- Probability.

#### **Objectives:**

- 1. To learn the basics of business decision-analysis.
- 2. To summarize business data numerically and graphically.
- 3. To understand the importance of business sampling methods, and be able to describe different business sampling methods.
- 4. To understand the process associated with statistical decisions, defining and formulating problems, analyzing the data, and using the results in decision making.

#### **Outcomes:**

After learning the course, the students should be able to:

1. Describe the concepts of statistics and data representation.

(nowledge Brings

- 2. Apply the concept of Measures of Central Tendency
- 3. Determine Sampling and Sampling Distribution
- 4. Implement various hypothesis testing techniques.
- 5. Illustrate correlation between the attributes
- 6. Articulate concepts of time series moving average.

#### **Detailed Syllabus:**

Unit	<b>Description</b>	Duration
1.	Progress Credibility Confidence	7
	Introduction to statistics	
	Importance of statistics in modern business environment	
	Definition of statistics, importance, scope and applications

# **Pre-requisite:**

• Concepts of Software Engineering and Software Testing

#### **Objectives:**

- To understand the fundamentals of Software Project Management
- To investigate software project planning and management tools
- To learn software project scheduling and tracking
- To discuss about the agile project management
- To know people management in software project

#### **Outcomes:**

After learning the course, the students should be able to:

CO1: Comprehend Project Management Concepts

CO2: Choose various techniques of Software Project Estimations

CO3: Apply Agile Project Management

CO4: Gain knowledge of configuration management

CO5: Analyze staffing process for team building and decision making in Software

# Detailed Syllabus:

Uni	Description	Duration
1	Introduction to Software Project Management	
	Introduction to Software Project Management	
	1.1 Overview of project Management(Processes and Knowledge Areas in Project	
	Management)	
	Project Definition, Project versus Flow type work	7
	1.2 Project management life cycle	/
	1.3 Build or Buy decision, Work Breakdown Structure (WBS)	
	1.4 Introduction to PMBOK	
	S/mrs 1099

# **Pre-requisite:**

DBMS, Basic SQL Queries and

### **Objectives:**

- 1. Develop proficiency in using Tableau, Weka, Oracle and MS Excel as tools for working with datasets.
- 2. To enable students to understand and implement various Data Mining algorithms on large dataset and evaluate the result.

### **Outcomes:**

After learning the course, the students should be able to:

- 1. Use multidimensional schema modeling techniques to organize and structure complex data for efficient analysis
- 2. Evaluate frequent patterns using Association Mining Techniques on large dataset
- 3. Evaluate various Classification Techniques on large dataset
- 4. Evaluate various Clustering Techniques on large dataset

Unit	Description	Duration
1	Working with a Dataset using Data warehouse and Data Mining Tools:	
	Tableau / R / Weka / Oracle/ MS Excel	4
2	Multidimensional Database :	
	Create multi-dimensional database for a mini data warehouse problem using	6
	Star Schema Model or Snowflake Schema Model.	

3	OLAP and Operations On OLAP  Perform various operations on Multidimensional Database: Roll-up, Roll- Down, Dicing, Slicing, Pivot, Ad-hoc Queries.	6
4	Association Rule Mining: Implementing Association Mining with Weka, Applying the Apriori Algorithm in Weka on a Real-World Dataset, Rules Generation, Applying the Apriori Algorithm on a Numeric Dataset/ Categorical Dataset. Setting Support Count and Confidence to find strong Association Rules	4
5	Clustering Implementing Clustering with Weka, Clustering Fisher's Iris Dataset with the Simple k-Means Algorithm, Hierarchical Clustering Algorithm. Interpret the result after applying Clustering algorithms, change setting for no of clusters	6
6	Classification Implementing Classification using Weka, J48 decision tree, interpreting results, using rules for prediction, Applying Naïve Bayes algorithm to a sample dataset.	34

### **Guidelines for Mini Project-I**

- About Course: The mini project is designed to help students develop practical ability and knowledge about practical tools/techniques in order to solve real life problems related to the industry, academic institutions and computer science research.
- The course Mini Project is one that involves practical work for understanding and solving problems in the field of computing. This course will also develop investigative, research and report writing skills and will provide an opportunity to investigate a chosen topic in considerable depth.
- Mini Project provides the opportunity for students to demonstrate the application of their programming and research skills, and to apply their knowledge to computing problems.

### **Objectives**

- To acquire practical skills and knowledge pertaining to tools and techniques with the aim of effectively addressing real-world issues.
- To familiarize students with the utilization of software engineering methodologies to analyze and devise solutions for real-world problems.
- To gain deeper understanding in specific functional areas
- To inculcate the team work skills
- To enhance communication skill

**Course Outcome:** After learning the course, the students should be able to:

- Demonstrate the theoretical concepts applied to a software development project
- Enhance critical thinking and problem-solving skills by identifying and addressing challenges that arise during the course of the project
- Evaluate the project outcomes based on established criteria and make informed decisions to improve the project outcomes
- To create innovative solutions by synthesizing and integrating knowledge from diverse sources to address complex challenges

#### Guidelines

Students are not restricted for software development only. They have the flexibility to Carry-out/perform/opt/achieve either of the following work during the semester to fulfill the requirements of the mini project:

- Industry Internship: Students can opt for an internship in an industry-related field to gain practical experience and apply their skills in a professional setting.
- Interdisciplinary Project: Students have the opportunity to collaborate with peers from different disciplines to work on a project that integrates knowledge and techniques from multiple areas.
- Startup Idea with Proof of Concept (POC): Students can develop their own startup idea and provide a proof of concept, demonstrating the feasibility and potential of their innovative concept.
- Paper Publication: Students can choose to conduct research and write a research paper on a relevant topic within the scope of their course, aiming for publication in a respected journal or conference.
- Achievement in National/International Project Competitions/Hackathons/Business Plan Competitions: Students can participate in various competitions or hackathons at national or international levels, showcasing their skills and innovations.
- Any other activity fulfilling the needs and objectives of the Mini Project: Students may propose and pursue alternative activities that align with the goals and objectives of the mini project, subject to the prior permission of the internal academic panel.
- Students are required to present the progress of the Mini Project work during the semester as per the schedule provided by the Project Coordinator.
- Evaluation of mini project shall be done for 50 marks. This evaluation shall be based on

at least two reviews required as per the nature of mini project work, with the necessary guidelines prepared time to time.

Students may also start the mini project work as soon as previous semester concludes.

At the end of semester, student shall submit necessary records of the project work as applicable.
