

PimpriChinchwad Education Trust's  
**Pimpri Chinchwad College of Engineering**

Sector No. 26, Pradhikaran, Nigdi, Pune 411044

*An Autonomous Institute Approved by AICTE and affiliated to SPPU, Pune*

**Curriculum Structure and Syllabus**  
**S.Y.B.Tech Information Technology**  
(Course 2020)

**Department of Information Technology**

**Effective from Academic Year 2023-24**  
(Updated with Minor Changes)

# VISION AND MISSION OF INSTITUTE

## Institute Vision

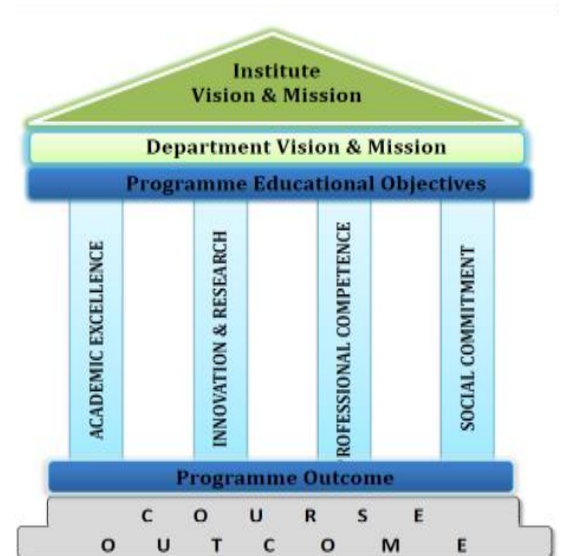

To be one of the top 100 Engineering Institutes of India in coming five years by offering exemplarily Ethical, Sustainable and Value Added Quality Education through a matching ecosystem for building successful careers.

## Institute Mission

1. Serving the needs of the society at large through establishment of a state-of-art Engineering Institute.
2. Imparting right Attitude, Skills, Knowledge for self-sustenance through Quality Education.
3. Creating globally competent and Sensible engineers, researchers and entrepreneurs with an ability to think and act independently in demanding situations.

## Quality Policy

We at PCCOE are committed to impart Value Added Quality Education to satisfy the applicable requirements, needs and expectations of the Students and Stakeholders. We shall strive for academic excellence, professional competence and social commitment in fine blend with innovation and research. We shall achieve this by establishing and strengthening state-of-the-art Engineering and Management Institute through continual improvement in effective implementation of Quality Management System.

	<b>Pimpri Chinchwad Education Trust's Pimpri Chinchwad College of Engineering</b>	
<b>Course Approval Summary</b>		

A) Board of Study-**Information Technology**

Sr. No.	Name of the Course	Course Code	Page number	Signature and Stamp of BoS
1	Logic Design and Computer Organization	BIT3301	11	
2	Discrete Mathematics	BIT3401	13	
3	Fundamentals of Data Structures	BIT3402	15	
4	Data Communication and Computer Networks	BIT3403	17	
5	Logic Design and Computer Organization-Lab	BIT3302	19	
6	Fundamentals of Data Structures –Lab	BIT3404	21	
7	Data Communication and Computer Networks Lab	BIT3405	24	
8	Microprocessors and Microcontrollers	BIT4301	30	
9	Data Structures & Algorithms	BIT4401	32	
10	Object Oriented Programming with JAVA	BIT4402	34	
11	Automata Theory	BIT4403	36	
13	Microprocessors and Microcontrollers –Lab	BIT4302	38	
14	Data Structures & Algorithms-Lab	BIT4404	40	
15	Object Oriented Programming-Lab	BIT4405	42	
16	Python Programming	BIT4911	58	
17	Web Development	BIT4912	60	

B) Board of Study-**Applied Sciences and Humanities**

<b>Sr. No.</b>	<b>Name of the Course</b>	<b>Course Code</b>	<b>Page number</b>	<b>Signature and stamp of BoS</b>
1	Applied Mathematics	BAS3205	6	
2	Data Analysis using R	BAS3206	8	
3	Universal Human Values	BHM3101	26	
4	Professional Skills for Engineers	BHM4101	56	
5	Life Skill-III	BHM3939	28	
6	Numerical Methods	BAS4601	44	
7	Mathematical Optimization	BAS4602	46	
8	Calculus of Variation	BAS4603	48	
9	Mathematical Modelling and Simulation	BAS4604	50	
10	Financial Mathematics	BAS4605	52	
11	Neural Network and fuzzy logic Control	BAS4606	54	
12	Life Skill-IV	BHM4940	62	
13	Environmental Science	BHM9961	64	

**Approved by Academic Council:**

Chairman, Academic Council  
Pimpri Chinchwad College of Engineering

**Approved by Board of Governors:**

Chairman, Board of Governors  
Pimpri Chinchwad College of Engineering

## Semester-III

<b>Program:</b>		<b>B. Tech. (Comp/IT)</b>		<b>Semester :</b>		<b>III</b>	
<b>Course :</b>		<b>Applied Mathematics</b>		<b>Code :</b>		<b>BAS3205</b>	
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Credit</b>	<b>Internal Evaluation</b>	<b>MTE</b>	<b>ETE</b>	<b>Total</b>
3	-	-	3	20	30	50	100
<b>Prior knowledge of</b> 1. Univariate Calculus 2. Multivariate Calculus <b>is essential.</b>							
<b>Course Objectives:</b> This course aims at enabling students, 1. To get acquainted with Linear differential equations of higher order applicable to electrical circuits. 2. To develop the problem solving skill using Statistical analysis and Probability theory. 3. To understand Del operator and its application to the vector fields. 4. To familiarize with Transform techniques such as Fourier transform, Z-transform and applications to Image processing.							
<b>Course Outcomes:</b> After learning the course, the students should be able to: 1. <b>Calculate</b> current for Electrical circuit's problems using the concepts of higher order linear differential equations. 2. <b>Apply</b> descriptive statistical techniques to find measures of variability of numerical data 3. <b>Analyze</b> the data using probability theory and hypothesis testing. 4. <b>Examine</b> the vector fields using concepts of vector differentiation. 5. <b>Evaluate</b> Fourier transform of functions using properties. 6. <b>Apply</b> Z-Transform to solve Difference equations.							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration [Hrs]</b>
I	<b>Linear Differential Equations (LDE):</b> Introduction of Linear and Nonlinear differential equations, linear differential equation of nth order with constant coefficients, General method, Shortcut methods, Method of Variation of Parameters, Applications of electrical circuits.						8
II	<b>Statistics:</b> Measures of Variability: Standard deviation, Coefficient of variation, Moments, Skewness and Kurtosis, Curve fitting, Correlation and Regression.						7
III	<b>Probability Distributions:</b> Probability, Theorems on Probability, Mathematical Expectation, Binomial, Poisson, and Normal Distributions. <b>Hypothesis Test:</b> p-Test, z-test, t-test, Chi-Square test, ANOVA Test.						7
IV	<b>Vector Differentiation:</b> Introduction, Vector differential operators, Gradient, Divergent, Curl, Physical Interpretation of Vector Differentiation, Directional Derivatives, Solenoidal, Irrotational and conservative fields, Scalar Potential.						8

V	<b>Fourier Transform (FT):</b> Complex exponential form of Fourier series, Fourier integral theorem, Fourier Sine & Cosine integrals, Fourier transform, Fourier Sine and Cosine transforms and their inverses.	7
VI	<b>Z - Transform (ZT):</b> Introduction, Standard properties, Z Transform of discrete functions and their inverses. Solution of difference equations.	8
<b>Total</b>		<b>45</b>

-	4	-	2	50	-	-	50
<b>Prior Knowledge of</b> 1. Descriptive Statistics 2. Inferential Statistics 3. Probability <b>is essential</b>							
<b>Course Objectives:</b> This course aims at enabling the students to learn data collection, visualization, and preprocessing techniques for data science.							
<b>Course Outcomes:</b> After learning the course, the students will be able to: <ol style="list-style-type: none"> <li>Understand the data properties and Identify the R packages related to data science.</li> <li>Make use of data preprocessing methods and generate quality data for analysis.</li> <li>Apply different data visualization techniques to understand the data.</li> <li>Analyze the data using analytical methods for regression for numerical data using the R.</li> <li>Develop a model for Prediction and Decision Making for a data set along with some of their characteristics, strengths, limitations, and applications.</li> <li>Construct the hypothesis for the data and test it for data set in R.</li> </ol>							
<b>Assignment No.</b>	<b>Suggested List of Assignments</b>						
<b>1</b>	Introduction to data analytics and R Software fundamentals: <ol style="list-style-type: none"> <li>Understanding the Data.</li> <li>R Packages for Data Science.</li> <li>Importing and Exporting Data in R Software.</li> <li>Getting Started: Analyzing Data in R Software.</li> <li>Accessing Databases with R Software</li> </ol>						
<b>2</b>	Data Wrangling: <ol style="list-style-type: none"> <li>Pre-processing Data in R Software</li> <li>Dealing with Missing Values in R Software</li> <li>Data Formatting in R Software</li> <li>Data Normalization in R Software</li> <li>Binning in R Software</li> <li>Turning categorical variables into quantitative variables in R Software</li> </ol>						
<b>3</b>	Data Visualization in R Software: <ol style="list-style-type: none"> <li>Histogram.</li> <li>Bar/ Line Chart.</li> <li>Box Plot (including group-by option)</li> <li>Scatter Plot (including 3D and other features)</li> <li>Mosaic Plot.</li> </ol>						

	f. Heat Map. g. 3D Graphs. h. Correlogram (GUIs)
4	Statistical Data Analysis: Descriptive Statistics: Central tendencies, Dispersion, Skewness, Kurtosis Probability, Normal Distribution Sampling & Sampling Distributions.
5	Exploratory Data Analysis: a. Correlation , Linear Regression and Multiple Linear Regression b. Hypothesis Testing. c. Analysis of Variance ANOVA.
6	Model Development using a dataset from Kaggle (Sample links are given below) and perform the following operation. a. Make visualization of data set for distribution of at least three attributes. b. Develop one descriptive model for the data set. c. Develop a model for Prediction and Decision Making for the data set. <b>sample links:</b> <a href="https://www.kaggle.com/code/cvaisnor/heart-2020/data">https://www.kaggle.com/code/cvaisnor/heart-2020/data</a> <a href="https://www.kaggle.com/code/kailash068/crop-recommendation/data">https://www.kaggle.com/code/kailash068/crop-recommendation/data</a> <a href="https://www.kaggle.com/datasets/debajyotipodder/co2-emission-by-vehicles">https://www.kaggle.com/datasets/debajyotipodder/co2-emission-by-vehicles</a> <a href="https://www.kaggle.com/datasets/csafrut2/higher-education-students-performance-evaluation">https://www.kaggle.com/datasets/csafrut2/higher-education-students-performance-evaluation</a>

#### Guidelines for Laboratory Conduction:

During every lab assignment the following activities will be carried out:

1. The instructor will explain the aims & objectives of the assignments.
2. The instructor will explain the topics required to carry out the assignment.
3. The students will do the hands on as per the Lab manual & Web resources provided.
4. The students will show the outcome to the instructor.
5. On each topic at least one assignment is expected to be submitted.

#### Assignment suggested:

1. Access the in build datasets in R, import and change the data type as per the requirement  
[\*The datasets for each assignment can be specified]
2. Access the open source dataset [Ex:“ Students Adaptability Level in Online Education “ from Kaggle] and apply all techniques of data cleaning , wrangling and summarize the properties of the dataset.
3. Use the same data of “ Students Adaptability Level in Online Education” [from Kaggle] and apply following operations
  - a. Make a visualization showing gender based adaptability
  - b. Make a visualization based on most used Internet type
  - c. Make a visualization based on age group
  - d. Make a visualization based on adaptability level of entire dataset
4. Case study for payroll dataset, exam marks dataset, etc. to view statistical measures and correlation
5. Case study on probabilistic approach and testing for data prediction
6. Demonstration of project on real time dataset for prediction and decision making

Program:	<b>B. Tech. I.T.</b>			Semester: <b>III</b>			
Course: <b>Logic Design and Computer Organization</b>				Code: <b>BIT3301</b>			
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Tutorial</b>	<b>Credit</b>	<b>Hours</b>	<b>IE</b>	<b>MTE</b>	<b>ETE</b>	<b>Total</b>
2	-	2	2	20	30	50	100

**Prior Knowledge of :**

1. Analog and Digital Electronics
2. Logic gates

**is essential**

**Course Objectives:**

1. To make undergraduates, aware of different levels of abstraction of computer systems from hardware perspective.
2. To learn and understand basic digital design techniques.
3. To develop design and implementation skills of combinational and sequential logic circuits.
4. To make undergraduates understand the functions, characteristics of various components of Computer: processor & memory.

**Course Outcomes:**

After learning the course, the students will be able to:

1. Explain K-Maps to simplify logic expressions.
2. Compare Combinational logic circuit design using SSI & MSI chips.
3. Develop Sequential circuits & its applications.
4. Summarize the functions & organization of Computer Architectures.

<b>Detailed Syllabus</b>		
<b>Unit</b>	<b>Description</b>	<b>Duration (H)</b>
1.	<p><b>Number System and Logic Minimization</b></p> <p>Number Systems: Binary, Octal, Hexadecimal and their conversions. signed binary number representation, complement representation and arithmetic's.</p> <p>Codes: BCD, Excess-3, Gray code, Binary Code and their conversions.</p> <p>Logic minimization: Representation of truth-table, SOP form, POS form, reduction techniques: K-Maps up to 4 variables, don't care conditions.</p>	10
2.	<p><b>Combinational Logic Design</b></p> <p>Design using SSI chips: Code Converters, Adders, Subtractors, n bit Binary Adder.</p> <p>Introduction to MSI chips: Multiplexer (IC 74153), De-multiplexer (IC 74138), Decoder (74238) Encoder (IC 74147), Binary adder (IC 7483).</p>	6
3.	<p><b>Sequential Logic Design</b></p> <p>Introduction to sequential circuits: Difference between combinational and sequential circuits; Memory element-Latch &amp; Flip-Flop.</p> <p>Flip- Flops: Logic diagram, truth table &amp; excitation table of SR, JK, D, T flip flops; Conversion from one FF to another, Study of flip flops with regard to asynchronous and synchronous, Preset &amp; Clear.</p> <p>Application of flip-flops: Counters- Asynchronous, Synchronous and Modulo N Counters, Registers-</p>	8

	shift register types& applications.	
4.	<p><b>Computer Organization</b></p> <p>Computer organization &amp; computer architecture: organization, functions &amp; types of computer units- CPU (typical organization, Functions, Types), Memory (Types &amp; their uses in computer), IO (types &amp; functions) &amp; system bus.</p> <p>(Address, data &amp; control bus), ALU (ALU signals, functions &amp; types); Register (types &amp; functions of user visible, control &amp; status registers such as general purpose, address registers, data registers, flags, PC, MAR, MBR, IR) &amp; control unit.</p> <p>Types of Computer Architectures: Von Neumann &amp; Harvard architecture, RISC and CISC Architectures.</p>	6
	<b>Total</b>	<b>30</b>

Program:	<b>B. Tech. I.T.</b>			Semester: <b>III</b>			
Course: <b>Discrete Mathematics</b>				Code: <b>BIT3401</b>			
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Tutorial</b>	<b>Credit</b>	<b>Hours</b>	<b>IE</b>	<b>MTE</b>	<b>ETE</b>	<b>Total</b>
2	1	3	3	20	30	50	100

**Prior Knowledge of:**

1. Basic Mathematics concepts.

**is essential**

**Course Objectives:**

1. To gain sound knowledge to formulate and solve problems with sets and propositions.
2. To understand and solve counting problems by applying elementary counting techniques to solve problems of discrete probability.
3. To understand Graph and Tree terminologies and models to be applied in real life problems.
4. To recognize types of relation, formulate and solve problems with relations and functions.
5. To understand basics of number theory and its applications.
6. To understand the various types' algebraic structures and its applications.

**Course Outcomes:**

After learning the course, the students will be able to:

1. Formulate formal proof techniques and solve the problems with logical reasoning.
2. Apply probability theory to solve combinatorial problems.
3. Compare types of relations and functions to provide solutions to computational problems
4. Apply the concepts of graph theory to devise mathematical models.
5. Apply the concepts of tree to solve problems
6. Select appropriate algebraic structure to solve problems.

<b>Detailed Syllabus</b>		
<b>Unit</b>	<b>Description</b>	<b>Duration (H)</b>
1.	<p><b>Sets And Propositions</b></p> <p>Sets: Sets, Combinations of Sets, Venn Diagram, Finite and Infinite Sets, Countable Sets, Multisets, Cartesian Product, Principle of Inclusion and Exclusion, Mathematical Induction.</p> <p>Propositions: Propositions, Logical Connectives, Conditional and Bi-conditional. Propositions, Logical Equivalence, Validity of Arguments by using Truth Tables, Predicates and Quantifiers, Applications of propositional logic</p>	8
2.	<p><b>Combinatorics And Discrete Probability</b></p> <p>Combinatorics: Rules of Sum and Product, Permutations, Combinations.</p> <p>Discrete Probability: Discrete Probability, Conditional Probability, Bayes Theorem, Applications of Combinatorics and Discrete Probability.</p>	7
3.	<p><b>Relations &amp; Functions</b></p> <p>Relations: Properties of Binary Relations, Closure of Relations, Warshall's Algorithm, Equivalence Relations, Partitions, Partial Ordering Relations, Lattices.</p> <p>Functions: Functions, Composition of Functions, Invertible Functions, Pigeonhole Principle</p>	8

4.	<b>Graph Theory</b> Graphs: Basic Terminologies, Multi-Graphs, Weighted Graphs, Sub Graphs, Isomorphic graphs, Complete Graphs, Regular Graphs, Bipartite Graphs, Operations on Graphs, Paths, Circuits, Hamiltonian and Eulerian graphs, Travelling Salesman Problem, Dijkstra's Algorithm, Planar Graphs, Graph Colouring.	8
5.	<b>Trees</b> Trees: Tree Terminologies, Rooted Trees, Properties, Prefix Codes, Spanning Trees, Fundamental Cut Sets and Circuits, Max flow –Min Cut Theorem (Transport Network). Binary Trees and traversal, Binary Search Tree and Traversals.	8
6.	<b>Elementary Number Theory</b> Algebraic Structures: Introduction Semigroup, Monoid, Group, Abelian Group, Permutation Groups, Ring, Integral Domain, Field. Applications of Algebraic Structures.	6
	<b>Total</b>	<b>45</b>

**Prior knowledge of:**

1. Programming and problem-solving skills

**is essential**

**Course Objectives:**

1. To apply C language constructs and pointers in depth
2. To learn and apply linear data structures and their applications
3. To apply various advanced data structures such as trees and graphs to the applications

**Outcomes:**

After learning the course, the students will be able to:

1. Explain the concepts of pointers, Dynamic memory allocation and Memory Management.
2. Explain Linear and Non Linear data structures
3. Compare the running time of Linear and Non-linear data structures
4. Apply the properties of Linear and nonlinear data structures
5. Analyze the various tree traversing algorithms to create and traverse Trees and Graph
6. Make a use of Symbol tables and hashing for efficient searching

<b>Detailed Syllabus</b>		
<b>Unit</b>	<b>Description</b>	<b>Duration (H)</b>
1.	<p><b>Pointers in C and File Handling:</b>            Introduction to Pointers, pointer to pointer, pointer to single and multidimensional arrays, array of pointers, pointer to functions, dynamic memory allocation, Pointer to file structure and basic operations on file, single and multiple file handling in C.            Time complexity &amp; Space complexity of an algorithm, and its representation.</p>	6
2.	<p><b>Linear Data Structures Using Sequential and Linked Organization:</b>            Concept of data structures, Concept of sequential organization, Multidimensional arrays and their storage representation: row-major and column-major form and address calculation. Representation of sparse matrix using arrays, algorithms for sparse matrix simple and fast transpose.            Concept of linked organization, singly linked list, doubly linked list, circular linked list.</p>	9
3.	<p><b>Stacks:</b>            Concept of the stack, stack as an ADT, Implementation of stack using linked organization. Concept of the implicit and explicit stack, Applications of the stack: reversing the list, expression conversion, and evaluation</p>	7

4.	<b>Queues:</b> Concept of queues as ADT, Implementation of queue using linked organization. Concept of the circular queue, double-ended queue, and priority queue. Applications of queues.	7
5.	<b>Trees</b> The difference in the linear and non-linear data structure, Trees, and binary trees-concept and terminology. Conversion of the general tree to binary tree. Binary tree as an ADT. Concept of Threaded binary Tree, Red and black tree, AVL tree and B+. Recursive and non-recursive algorithms for binary tree traversals, Binary search trees, Binary search tree as ADT, Expression tree.	9
6.	<b>Graphs</b> Graph as an ADT, Representation of graphs using adjacency matrix and adjacency list, Depth First Search and Breadth-First Search traversal. Prim's and Kruskal's algorithms for minimum spanning tree. Symbol Tables & Hashing: Symbol table notation, hashing functions, collision techniques	7
	<b>Total</b>	<b>45</b>

**Prior Knowledge of:**

1. Basic Mathematics
2. Fundamentals of communication

**is essential**

**Course Objectives:**

1. To gain the knowledge of communication systems.
2. To Learn and understand the History of Computer Network and its evolution with the help of service models
3. To learn the various issues of Network layer, its management and Routing algorithms at Network layer
4. To learn the services offered by Transport Layer
5. To learn the session layer and Applications Layer protocols; and its services.
6. To Learn and understand the Internet and Web functionality with its protocols

**Course Outcomes:**

After learning the course, the students will be able to:

1. Identify various data communication techniques along with types of network
2. Interpret OSI and TCP/IP Protocol suit
3. Design routing algorithms to find shortest path in network
4. Compare TCP and UDP services
5. Demonstrate application layer protocols
6. Infer Internet and web hosting using DNS

<b>Detailed Syllabus</b>		
<b>Unit</b>	<b>Description</b>	<b>Duration (H)</b>
1.	<b>Introduction to Data Communication:</b> Fundamentals of Data Communication, Type of Connections, Network Topologies, Types of Networks-LAN, WAN And MAN; Data and Signals, Periodic Analog Signals, Digital Signals, Transmission Impairment, Data Rate Limits, Performance; Introduction to Digital to Digital, Analog to Digital, Digital to Analog, Analog to Analog Conversions; Transmission Modes.	10
2.	<b>Introduction to Computer Networks:</b> Introduction to OSI and TCP/IP Protocol Suite, Classification of Addressing Mechanisms, Guided Media: Twisted Pair Cable, Coaxial Cable and Fiber-Optic Cable, Unguided Media: Wireless, Radio Waves, Microwaves and Infrared; Introduction to Data Link Layer	7
3.	<b>Network Layer and Routing Principles:</b> Network Layer Services, Packet Switching: Datagram and Virtual Circuit Approach, Network Layer Performance: Delay, Throughput, Packet Loss, Congestion Control; IPv4: Datagram Format; Routing Algorithms: Distance Vector, Link-state, Path Vector Routing.	8

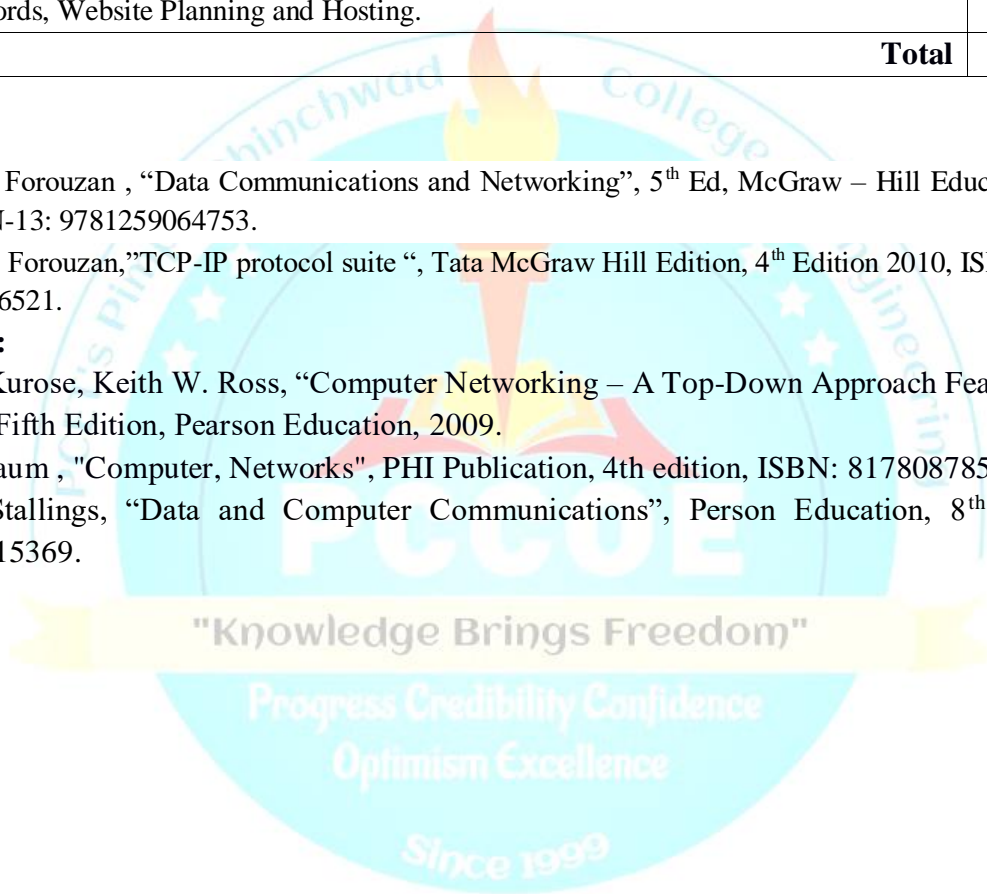

4.	<b>Transport Layer and its Services:</b> Overview of Transport Layer, Transport Layer services, User Datagram Protocol (UDP): User Datagram, UDP Services, UDP Applications; Transmission Control Protocol (TCP): TCP Services, Features, TCP Segment, TCP Connection, TCP Congestion Control.	8
5.	<b>Application Layer Protocols:</b> Introduction to Application Layer, Client-Server Paradigm, Socket Interface, DHCP, FTP, TFTP, WWW & HTTP, Electronic Mail: SMTP, POP3, IMAP and MIME.	6
6.	<b>Internet and Web:</b> Internet Addressing Scheme, Domain Name System (DNS): Need for DNS, Namespace, DNS in the Internet, Resolution, DNS Messages, DNS servers, Types of Records, Website Planning and Hosting.	6
<b>Total</b>		<b>45</b>

Program:	<b>B. Tech. I.T.</b>			Semester: <b>III</b>			
Course: <b>Logic Design and Computer Organization Laboratory</b>				Code: <b>BIT3302</b>			
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Practical</b>	<b>Tutorial</b>	<b>Credit</b>	<b>Hours</b>	<b>TW</b>	<b>OR</b>	<b>PR</b>	<b>Total</b>
2	-	1	2	25	-	-	25

**CourseObjectives:**

1. To design & implement combinational and sequential circuits.
2. To learn simulation of digital systems.
3. To Study Basic Computer Architecture.

**CourseOutcomes:**

After learning the course, the students will be able to:

1. Develop K-Maps for simplification of logic functions.
2. Construct Combinational & Sequential logic circuits.
3. Outline the simulation of basic Computer blocks such as ALU & memory.

Assignment No.	Suggested List of Assignments
<b>GROUP A</b> <b>Combinational Logic Design (Any 4)</b>	
1.	Realize Full Adder and Subtractor using a) Basic Gates and b) Universal Gates.
2.	Design and implement 4-bit BCD to Excess-3 code.
3.	Design and implement 1 digit BCD adder using IC7483.
4.	Design and implement following using multiplexer IC 74153 1) full adder 2) Any three-variable function (cascade method).
5.	Design and implement full subtractor using decoder IC 74138.
<b>GROUP B</b> <b>Sequential Logic Design</b>	
6.	Design and implement 3 bits Up and 3 bit Down Asynchronous Counters using master slave JK flip-flop IC 7476.
7.	Design and implement 3 bits Up and 3 bit Down Synchronous Counters using master slave JK flip-flop IC 7476.
8.	Design and implement Modulo 'N' counter using IC7490. (N= 100 max).
9.	Design of Ripple Counter using suitable Flip Flops.
<b>GROUP C</b> <b>Computer organization (Any 1 using virtual lab simulator)</b>	
10.	Design & simulate single bit ALU with four functions (AND, OR, XOR, ADD).
11.	Design & simulate single bit RAM cell.
<b>GROUP D</b> <b>Study Practical(Any 1)</b>	

12.	Study of Shift Registers (SISO,SIPO, PISO,PIPO).
13.	Study of Basic Computer Architecture in detail.
Remark: Implementation of all assignments is encouraged.

Course: <b>Fundamentals of Data Structures Laboratory</b>					Code: <b>BIT3404</b>		
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Credit</b>	<b>TW</b>	<b>OR</b>	<b>PR</b>	<b>Total</b>
-	4	-	2	50	-	25	75

**Course Objectives:**

1. To write a neat code by following coding standards by selecting appropriate data structures.
2. To implement abstract properties of various data structures such as stacks, queues.
3. To apply various advanced data structures such as trees and graphs to the applications.

**Course Outcomes:**

After learning the course, the students will be able to:

1. Construct linear and non linear data structures and apply it on various computing problems.
2. Analyze the problem requirements and determine the most appropriate data structure to solve it.
3. Implement the properties of linear data structure as ADT.
4. Develop the project based on concepts of Data structures.

<b>Assignment No.</b>	<b>Suggested List of Assignments</b> (Write a program in C)
<b>GROUP A</b>	
1.	<p><b>Assignments for the practice of language syntax, data types, and programming constructs</b></p> <p>a) To simulate a simple calculator that performs basic tasks such as addition, subtraction, multiplication, and division.</p> <p>b) Pass two parameters to function as(start and end), and <u>display all prime numbers between two Intervals</u></p> <p>c) Create class STORE to keep track of Products (Product Code, Name, and price). Display menu of all products to the user. Generate bill as per order.</p> <p>d) Accept a string and change the case of each character of the string. Example “THIs Is a C Program” changes to “thiSiS A c pROGRAM”.</p> <p>e) Accept a string from the user and perform the following string operations- i. Calculate the length of string ii. String reversal iii. Equality check of two strings iii. Check palindrome ii. Check substring (Pointer to strings)</p> <p>f) Represent matrix using two-dimensional arrays and perform the following operations without using pointers: i. Addition ii. multiplication</p>

**GROUP B (Any 8)**

2.	Represent sets using one-dimensional arrays and implement functions to perform i. Union ii. Intersection iii. Difference iv. Symmetric difference of two sets
3.	Represent matrix using two-dimensional arrays and perform the following operations with pointers: i. Addition ii. multiplication iii. transpose iv. Saddle point
4.	Write a Menu driven program in C for a cricket player's display board. The information of the cricketer can be (not limited to) Name, Age, Country, Category (Batsman, Bowler, Wicket keeper, All-rounder), Number of ODI's played, Number of International 20-20's played. Display following. a) Number of batsman of a particular country b) Sort the Batsman as per the average batting score(Bubble/insertion sort) c) Batsman with highest average score (Binary search) d) Number of bowlers of a particular country e) The bowler that has taken a maximum no of wickets f) Show particular players the entire "Display board information" g) Delete/Modify the record
5.	Implement a sparse matrix with operations like initialize empty sparse matrix, insert an element, add two matrices, transpose a matrix.
6.	Implement a Polynomial with operations like create an empty polynomial, insert an entry into a polynomial, add two polynomials and evaluate a polynomial.
7.	Department of Information Technology has a student's club named 'Pinnacle Club'. Students of the Second, third and final year of the department can be granted membership on request. Similarly, one may cancel the membership of the club. The first node is reserved for the president of the club and the last node is reserved for the secretary of the club. Write C program to maintain club member's information using a singly linked list. Store student PRN and Name. Write functions to a) Add and delete the members as well as the president or even secretary. b) Compute the total number of members of the club c) Display members of the club d) Display list in reverse order using recursion
8.	Implement any database using a doubly-linked list with the following options a) Insert a record b) delete a record c) modify a record d) Display list forward e) Display list backward
9.	To convert decimal numbers to binary numbers using the stack as sequential or linked representation.
10.	Implement stack as an abstract data type using linked list and use this ADT for conversion of infix expression to postfix, prefix, and evaluation of postfix and prefix expression.
11.	Implement Circular Queue using Array. Perform following operations on it.

	<ul style="list-style-type: none"> <li>a) Insertion (Enqueue)</li> <li>b) Deletion (Dequeue)</li> <li>c) Display</li> </ul>
12.	<p>Implement priority queue as ADT using a single linked list for servicing patients in a hospital with priorities as</p> <ul style="list-style-type: none"> <li>a) Serious (top priority)</li> <li>b) medium illness (medium priority)</li> <li>c) General (Least priority)</li> </ul>
13.	<p>Department maintains student information. The file contains roll number, name, division, and address. Write a program to create a sequential file to store and maintain student data. It should allow the user to add, delete information of the student. Display information of the particular employee. If the record of the student does not exist an appropriate message is displayed. If a student record is found it should display the student details.</p>
14.	<p>Construct and expression tree from postfix/prefix expression and perform recursive and non-recursive In-order, pre-order and post-order traversals.</p>
15.	<p>Implement binary search tree and perform following operations: a. Insert b. Delete c. Search d. Mirror image e. Display f. Display level wise (algorithmic analysis)</p>
16.	<p>Implement DFS and BFS on a graph.</p>
17.	<p>Represent any real-world graph using adjacency list /adjacency matrix find minimum spanning tree using Prim's algorithm.</p>
<b>GROUP C (Mini-project)</b>	
18.	<p>Mini-project: Write an application demonstrating your skills in defining a problem, writing down the requirements carefully, designing a modular solution with clear separation of abstract data types and their use, design of proper function prototypes, and division of work among functions. The application can be defined after discussion with the course instructor.</p>

**Remark:** Assignment 1 (week 1) is for practice of all prerequisites. Hence, this assignment is not included in the Practical Exam.

**Course Objectives:**

1. To study installation, maintenance of network Laboratory based on Computer Networks Technology
2. To design network by using various topologies
3. To Learn and apply the TCP/IP commands
4. To learn and use Network Simulators
5. To learn various Server application

**Course Outcomes:**

After learning the course, the students will be able to:

1. Design network topologies
2. Experiment Network commands
3. Design the networks using the simulators
4. Configure network server services for an application
5. Design network protocols in web applications.
6. Simulate Configuration of mail server

**Detailed Syllabus**

<b>Unit</b>	<b>Description</b>
1.	Network Design by using various Topologies in CISCO Packet tracer
2.	Basic TCP/IP utilities and commands. (eg: ping, ifconfig, tracert, arp, tcpdump, whois, host, netsat, nslookup, ftp, telnet etc...)
3.	Design of <ul style="list-style-type: none"> <li>• Small Network</li> <li>• Large Network</li> </ul> using CISCO Packet Tracer / NS3.0 Simulators
4.	Installation and Configuration of the Following <ul style="list-style-type: none"> <li>• Remote Login Service – TELNET/SSH</li> <li>• Configuration of FTP server and accessing it via FTP Client.</li> <li>• Installation and configuration of APACHE WEB SERVER / IIS</li> <li>• PWS along with HTTP server.</li> <li>• Installation and configuration of DHCP Server in Wireless Environment using an Access Point.</li> <li>• Installation and configuration of DNS Server.</li> </ul> Installation and configuration of Mail Server.

**Instruments Required:**

1. LAN Trainer Kit
2. Unmanaged Switch

3. Router
4. Access Point

**Prior knowledge:** Nil

**Course Objectives:**

1. To help the students appreciate the essential complementarity between 'VALUES' and 'SKILLS' to ensure sustained happiness and prosperity which are the core aspirations of all human beings.
2. To facilitate the development of a Holistic perspective among students towards life and profession as well as towards happiness and prosperity based on a correct understanding of the Human reality and the rest of existence. Such a holistic perspective forms the basis of Universal Human Values and movement towards value-based living in a natural way.
3. To highlight plausible implications of such a Holistic understanding in terms of ethical human conduct, trustful and mutually fulfilling human behaviour and mutually enriching interaction with Nature.

**Course Outcomes:**

After learning the course, the students will be able to:

1. Understand the relevance of Universal Human Values.
2. Interpret the concept of 'Self' & 'Body'.
3. Develop harmony in the family based on nine Universal Human Values.
4. Apply the sense of Harmony in society.
5. Take part in maintaining coexistence with Nature.
6. Integrate Universal Human Values in personal and professional life.

**Detailed Syllabus:**

Unit	Description	Duration
1	<b>Introduction to Value Education:</b> Understanding Value Education, Self-exploration as the Process for Value Education, Continuous Happiness and Prosperity – the Basic Human Aspirations, Right Understanding, Relationship and Physical Facility, Happiness and Prosperity – Current Scenario, Method to fulfil the Basic Human Aspirations	06
	Practice Session: Sharing about Oneself, Exploring Human Consciousness, Exploring Natural Acceptance	03
2	<b>Harmony in the Human Being:</b> Understanding Human being as the Co-existence of the Self and the Body, Distinguishing between the Needs of the Self and the Body, The Body as an Instrument of the Self, Understanding Harmony in the Self, Harmony of the Self with the Body, Programme to ensure self-regulation and Health	06
	Practice Session: Exploring the difference of Needs of Self and Body, Exploring Sources of Imagination in the Self, Exploring Harmony of Self with the Body	03
3	<b>Harmony in the Family:</b> Harmony in the Family – the Basic Unit of Human Interaction, Values in Human-to-Human Relationship, Nine universal values in relationships viz. Trust, Respect, Affection, Care, Guidance, Reverence, Glory, Gratitude, Love	04

	Practice Session: Exploring the Feeling of Trust, Exploring the Feeling of Respect	03
4	<b>Harmony in Society:</b> Understanding Harmony in the Society, Vision for the Universal Human Order, Human Order Five Dimensions	03
	Practice Session: Exploring Systems to fulfil Human Goal	02
5	<b>Harmony in the Nature/Existence:</b> Understanding Harmony in the Nature, Interconnectedness, self-regulation and Mutual Fulfilment among the Four Orders of Nature, Realizing Existence as Co-existence at All Levels, The Holistic Perception of Harmony in Existence	03
	Practice Session: Exploring the Four Orders of Nature, Exploring Co-existence in Existence	02
6	<b>Implications of the Holistic Understanding – a Look at Professional Ethics:</b> Natural Acceptance of Human Values, Definitiveness of (Ethical) Human Conduct, A Basis for Humanistic Education, Humanistic Constitution and Universal Human Order, Competence in Professional Ethics, Holistic Technologies, Production Systems and Management Models-Typical Case Studies, Strategies for Transition towards Value-based Life and Profession	04
	Practice Session: Exploring Ethical Human Conduct, Exploring Humanistic Models in Education, Exploring Steps of Transition towards Universal Human Order	06
	<b>Total</b>	<b>45</b>

**Prior knowledge:** Nil

**Course Objectives:**

1. To attain mental, emotional balance and spiritually to achieve self-realization and enlightenment to help better understanding of the inner personality & its establishment of harmony with the external demands.
2. To learn to build team spirit and adapt to the various skills required in various sports activities.
3. To provide a platform to express their mind, body, and emotions through performing arts.

**Course Outcomes:**

After completing the course, the students should be able to:

1. Achieve a balanced state of mind and enjoy improved mental, physical, emotional, and spiritual wellbeing.
2. Apply sportsmanship skills in the context of leadership, sports management etc.
3. Demonstrate the ability to think critically about a variety of visual and performing arts.

<b>Detailed Syllabus:</b>		
<b>Unit</b>	<b>Description</b>	<b>Duration (Hrs.)</b>
1.	<b>Practicing Meditation</b> Pranayama and Breathing exercises, Meditation Technique, Thoughtless Awareness: Through Patanjali/Sahajayoga/Vipassana/Madhyastha Darshan/ Art of Living etc.,or <b>Sports:</b> Indoor Games / Outdoor Games	<b>12</b>
2.	<b>Performing arts</b> Music, Singing, Poetry, Indian Conventional Dancing, Photography, Short Movie Making, Painting/ Sketching/ Drawing, Theatre Arts, Anchoring, Calligraphy etc.	<b>12</b>
	<b>Total</b>	<b>24</b>

# Course Syllabus

## Semester-IV

"Knowledge Brings Freedom"

Progress Credibility Confidence  
Optimism Excellence

Since 1999

<b>Program:</b>	<b>B. Tech. I.T.</b>			<b>Semester : IV</b>			
<b>Course : Microprocessors and Microcontrollers</b>				<b>Code :BIT4301</b>			
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Tutorial</b>	<b>Credit</b>	<b>Hours</b>	<b>IE</b>	<b>MTE</b>	<b>ETE</b>	<b>Total</b>
2	-	2	2	20	30	50	100

**Prior Knowledge of :**

1. Number system and logic minimization
2. Computer organization & computer architecture

**is essential**

**Course Objectives:**

1. To study architecture and features of 8086 microprocessors.
2. To know the programming with 8086 concepts.
3. To study architectural details of PIC18 microcontroller.
4. To introduce the concept of PIC I/O Ports and Timer.

**Course Outcomes:**

After learning the course, the students should be able to:

1. Explain concepts of assembly language programming tools & 8086 architecture.
2. Discuss assembly language programming concepts & Interrupt Structure.
3. Describe architecture and memory organization of PIC18 microcontroller.
4. Apply the concepts of I/O ports and timers of PIC18.

<b>Detailed Syllabus</b>		
<b>Unit</b>	<b>Description</b>	<b>Duration (H)</b>
1.	<b>Introduction To Assembly Language Programming &amp; 8086 Processor</b> Introduction to assembly language programming, ALP tools- Assembler, Linker, Loader, Debugger, Emulator, Assembler directives, Far and near procedure, Macros, DOS Internals, DOS Calls. Introduction to microprocessor concept, 8086 - Features and Architecture.	<b>7</b>
2.	<b>Programming With 8086</b> Pin out Diagram, Register Set, 8086 Real mode segmentation and Address translation, Addressing modes, Instruction set. 8086 Interrupt structure, ISR.	<b>8</b>
3.	<b>PIC Microcontroller Architecture</b> Introduction: Microcontroller, Difference between microprocessor and microcontroller, Criteria for selection of microcontroller, PIC18F: Features and architecture, Pin out Diagram, Registers set. Program and data memory organization: The Program Counter and Programmable ROM space in the PIC, File register and Access bank, Bank switching; Addressing modes: Addressing modes with instruction example, Reset operations, Brownout reset, Watchdog timer & Configuration registers.	<b>8</b>
4.	<b>PIC I/O Ports and Timer</b> I/O Port: I/O Port structure with programming: I/O Port structure, I/O Port programming, I/O Bit manipulation Programming. Timer/Counter: Registers used for Timer/Counter operation, Delay calculations, Programming of Timers using Embedded C. Case Study Traffic light signal controller using Timer/Counter.	<b>7</b>
	<b>Total</b>	<b>30</b>

**Text Books:**

1. James Turley, "Advanced 80386 Programming Techniques", McGraw Hill Education.
2. Muhammad Ali Mazidi , Danny Causey, RolinMcKinlay, "PIC Microcontroller and Embedded Systems: Using Assembly and C for PIC18", 4th Edition by,Pearson international edition.

**Reference Books:**

1. Walter A. Tribel, Avtar Singh, "The 8088 and 8086 Microprocessors", 4th edition, Prentice Hall of India.
2. Ray Duncan, "Advanced MS DOS Programming", 2nd edition, BPB Publications.
3. Peatman, John B, "Design with PIC Microcontroller", Pearson Education PTE.
4. Ramesh Gaonkar, "Fundamentals of Microcontrollers and Applications In Embedded Systems(with the PIC18 Microcontroller Family)"Thomson/Delmar Learning; 1 edition (January 8, 2007)ISBN:978-1401879143.

Program:	<b>B. Tech. I.T.</b>			Semester: <b>IV</b>			
Course: <b>Data Structures and Algorithms</b>				Code: <b>BIT4401</b>			
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Tutorial</b>	<b>Credit</b>	<b>Hours</b>	<b>IE</b>	<b>MTE</b>	<b>ETE</b>	<b>Total</b>
3	-	3	3	20	30	50	100

**Prior knowledge of:**

1. Basics of trees and graphs
2. Proof Techniques

**is essential**

**Course Objectives:**

1. To know the basics of computational complexity analysis of various algorithms.
2. To select appropriate algorithm design strategies to solve real-world problems.
3. To understand the concept of nondeterministic polynomial algorithms.

**Course Outcomes:**

After learning the course, the students will be able to:

1. Explain the importance of computational complexity in algorithm design and optimization
2. Apply Divide & Conquer as well as Greedy approach to solve various problems.
3. Make a use of Dynamic Programming strategy to solve optimization problem.
4. Apply Backtracking and different methods of Branch and Bound strategy to solve various problems.
5. Analyze computational complexity of various algorithms using asymptotic notations.
6. Classify P, NP, NP-complete, NP-Hard problems.

<b>Detailed Syllabus</b>		
<b>Unit</b>	<b>Description</b>	<b>Duration (H)</b>
1.	<p><b>Analysis of Algorithm:</b> Efficiency- Analysis framework, asymptotic notations – big O, theta and omega. Analysis of sorting techniques. Analysis of Non-recursive and recursive algorithms: Solving Recurrence Equations using Masters theorem and Substitution method. Brute Force method: Introduction to Brute Force method &amp; Exhaustive search, Brute Force solution to 8 queens’ problem.</p>	7
2.	<p><b>Divide And Conquer</b> Divide &amp; Conquer: General method, Binary Search, Merge sort and Quick sort <b>Greedy Method</b> Greedy Method: General method and characteristics, Optimal storage on tapes, Fractional Knapsack problem. Single Source shortest Path.</p>	9
3.	<p><b>Dynamic Programming:</b> Dynamic Programming: General strategy, Principle of optimality, Multistage Graph problem, 0/1 knapsack Problem, , Bellman Ford Algorithm Travelling Salesman Problem.</p>	8
4.	<p><b>Backtracking</b> Backtracking: General method, Recursive backtracking algorithm, Iterative backtracking method. 8-Queen problem, Sum of subsets, Graph coloring</p>	8

5.	<b>Branch-and-bound</b> The method, Control abstractions for Least Cost Search, Bounding, FIFO branch and bound, LC branch and bound, 0/1 Knapsack problem – LC branch and bound and FIFO branch and bound solution, Traveling salesperson problem- LC branch and bound	7
6.	<b>Complexity Theory:</b> The classes P, NP, NP complete, NP hard satisfiability problem, proofs for NP complete problem, Clique, Vertex cover problem.	6
	<b>Total</b>	<b>45</b>

**Text Books:**

1. E. Horowitz, S. Sahani, S. Anderson-Freed "Fundamentals of Data Structures in C", Universities Press, 2008.
2. Ellis Horwitz, Sartaj Sahni, Raj Sekaran. Fundamentals of computer algorithms University Press.

3. Gilles Brassard, Paul Bratle, Fundamentals of Algorithms, Pearson, ISBN 978-81-317-1244.
4. Y. Langsam, M. Augenstin, A. Tannenbaum, "Data Structures using C and C++", 2nd Edition, Prentice Hall of India, 2002, ISBN-81-203-1177-9.

Program:	<b>B. Tech. I.T.</b>			Semester: <b>IV</b>			
Course: <b>Object Oriented Programming with JAVA</b>				Code: <b>BIT4402</b>			
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Tutorial</b>	<b>Credit</b>	<b>Hours</b>	<b>IE</b>	<b>MTE</b>	<b>ETE</b>	<b>Total</b>
2	-	2	2	20	30	50	100

**Prior knowledge of:**

1. Problem solving skills
2. Procedure Oriented Programming

**is essential**

**Course Objectives:**

1. To teach fundamentals of object-oriented concepts and programming
2. To apply the concepts of object-oriented paradigm.
3. To develop object oriented programming skills
4. To design and implement applications for real life problems by using object oriented programming.

**Course Outcomes:**

After learning the course, the students will be able to:

1. Explain features of object oriented programming
2. Illustrate classes for real life applications.
3. Construct hierarchy of classes using the concept of inheritance and polymorphism.
4. Relate exception handling with real life example.

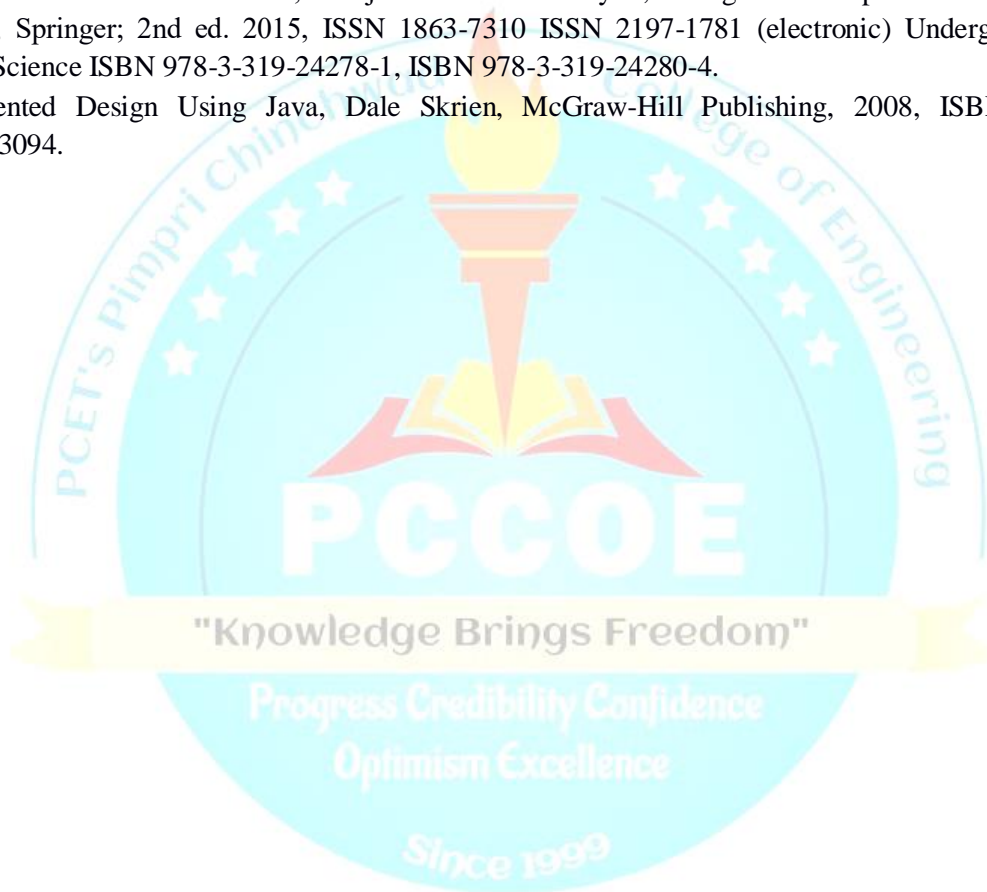

<b>Detailed Syllabus</b>		
<b>Unit</b>	<b>Description</b>	<b>Duration (H)</b>
1	<b>Foundations of Object Oriented Programming</b> Introduction to Java : Basics of Java programming: Features of Java, Overview of Java, JAVA Programming Environment, Data types, Variables, Operators, Using Control Statements (Branching: if, switch; Looping: while, do-while, for; Jumping statements: break, continue and return) , Static Keyword, Java methods, Arrays in java. Object Oriented Paradigm, Features of Object-Oriented Programming: Objects and Classes, Data Abstraction and Encapsulation, Inheritance, Polymorphism, Dynamic Binding, Message Communication.	9
2	<b>Classes, Methods and Constructors</b> Class Fundamentals, Methods, Constructors, Instance variable hiding, Garbage Collection, Finalize Method, Method Overloading, Object as a Parameter, Returning Object, Visibility/Access Control, Static Variable and Methods.	7
3	<b>Inheritance and Polymorphism</b> Basics & types of Inheritance, Use of Super, Constructors in derived Classes, Method Overriding, Dynamic Method Dispatch, Abstract Classes, and Using Final with inheritance, Interfaces and Packages.	8
4	<b>Exception Handling</b> Fundamentals, Exception Types, Using try and catch, throw, throws and finally, multiple catch clauses, Nested try statements, built in exceptions.	6
	<b>Total</b>	<b>30</b>

**Text Books:**

4. Object-Oriented Design Using Java, Dale Skrien, McGraw-Hill Publishing, 2008, ISBN - 0077423097, 9780077423094.

Program:		<b>B. Tech. I.T.</b>			Semester: <b>IV</b>		
Course: <b>Automata Theory</b>					Code: <b>BIT4403</b>		
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Tutorial</b>	<b>Credit</b>	<b>Hours</b>	<b>IE</b>	<b>MTE</b>	<b>ETE</b>	<b>Total</b>
3	1	4	4	20	30	50	100

**Prior knowledge of:**

1. Logic and Set Theory.
2. Computer Programming and Problem Solving

**is essential**

**Course Objectives:**

1. To understand the basics of automata theory and its operations.
2. To study various automata for different types of language classes.
3. To understand the fundamentals of decidability.

**Course Outcomes:**

After learning the course, the students will be able to:

1. Draw finite state machines for computing problems.
2. Convert regular expressions and Finite Automata into each other for the formal languages.
3. Generate the grammar for formal languages.
4. Prepare push down automata for formal languages.
5. Construct Turing machine for formal languages.
6. Explain the decidability and undecidability problems.

<b>Detailed Syllabus</b>		
<b>Unit</b>	<b>Description</b>	<b>Duration (H)</b>
1.	<b>Finite State Machines (FSM)</b> Basic Concepts: Symbols, strings, formal and natural languages. FSM without output: definition and construction-Deterministic Finite Automata (DFA), Nondeterministic Finite Automata (NFA) with and without epsilon. FSM with output: Definition and construction of Moore and Mealy machines, applications of automata.	12
2.	<b>Regular Expressions</b> Definition of Regular Expressions (RE), Construction of regular expression of the given language, construction of language from the RE, construction of FA from the given RE using direct method, conversion of NFA to DFA, minimization of DFA, conversion of FA to RE using Arden's theorem.	12
3.	<b>Context Free Grammar and Languages</b> Introduction, formal definition of grammar, derivation process, Context Free Grammar (CFG), ambiguous CFG, removal of ambiguity, simplification of CFG, normal forms, Chomsky hierarchy, regular grammar.	10
4.	<b>Pushdown Automata</b> Introduction and definition of Push Down Automata (PDA), Construction of deterministic and non-deterministic PDA.	10
5.	<b>Turing Machines</b> Formal definition of a Turing machine (TM), Design of Turing machines, Variants of Turing machines. Comparisons of all automata.	10

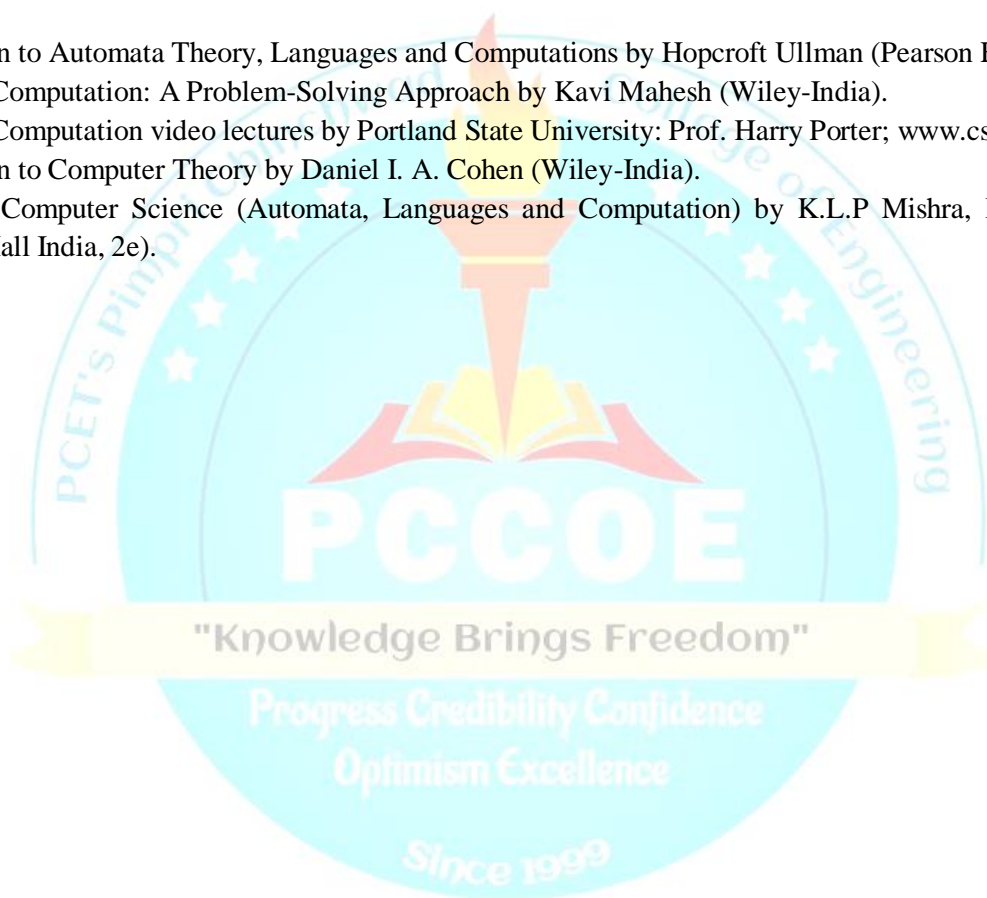

6.	<b>Decidability</b> Decidability problems, recursive languages and recursively enumerable languages, decidability problems related to regular languages and context free grammar, universal Turing machine, halting problem of TM, un-decidable problems, post correspondence problem, mapping reducibility.	6
	<b>Total</b>	<b>60</b>

**Text Books:**

1. Introduction to the Theory of Computation by Michael Sipser (CENGAGE Learning, 3e).
2. Theory of Computation by Vivek Kulkarni (Oxford University Press).

**Reference Books:**

1. Introduction to Automata Theory, Languages and Computations by Hopcroft Ullman (Pearson Education, 3e).
2. Theory of Computation: A Problem-Solving Approach by Kavi Mahesh (Wiley-India).
3. Theory of Computation video lectures by Portland State University: Prof. Harry Porter; [www.cs.pdx/~harry](http://www.cs.pdx/~harry)
4. Introduction to Computer Theory by Daniel I. A. Cohen (Wiley-India).
5. Theory of Computer Science (Automata, Languages and Computation) by K.L.P Mishra, N. Chandrasekaran (Prentice Hall India, 2e).

Program:	<b>B. Tech. I.T.</b>			Semester : <b>IV</b>			
Course : <b>Microprocessor &amp; Microcontroller Laboratory</b>				Code : <b>BIT4302</b>			
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Credit</b>	<b>TW</b>	<b>OR</b>	<b>PR</b>	<b>Total</b>
-	2	-	1	25	-	25	50

**Course Objectives:**

1. To learn assembly language programming of 8086 microprocessors.
2. To learn embedded C programming and PIC18FXXXmicrocontrollers.
3. To learn interfacing of real-world input and output devices to PIC18 microcontroller.

**Course Outcomes:**

After learning the course, the students will be able to:

1. Execute assembly language program to perform different operations.
2. Apply concepts related to embedded C Programming.
3. Study of ARM processor.

<b>Assignment No.</b>	<b>Suggested List of Assignments</b>
<b>GROUP A (Any 3)</b>	
1.	Write Assembly Language Program (ALP) to add array of N numbers stored in the memory.
2.	Write menu driven ALP to convert 4-digit Hex number into its equivalent BCD number and 5-digit BCD number into its equivalent HEX number. Make your program user friendly to accept the choice from user for i. HEX to BCD ii. BCD to HEX iii. EXIT. Display proper strings to prompt the user while accepting the input and displaying the result. Write near procedures to complete the task.
3.	Write ALP to perform following operation on string: i. Find and display length ii. Display reverse iii. Check whether string is palindrome or not. Display proper strings to prompt the user while accepting the input and displaying the result. Write near procedures to complete the task.
4.	Write menu driven ALP to perform string manipulations. The strings to be accepted from the user is to be stored in code segment Module_1 and write FAR PROCEDURES in code segment Module_2 to perform any two of the following string operations: i. Concatenation of two strings. ii. Comparison of two strings. iii. Finding Number of occurrences of a sub-string in the given string iv. Finding number of alphabets, digits, special characters, lower & upper case alphabets, words and number of lines from the text.
<b>GROUP B(Any 3)</b>	
5.	Study of Embedded C programming language (Overview, syntax, One simple program like addition of two numbers).
6.	Write an Embedded C program to add array of n numbers.

7.	Write an Embedded C program to transfer elements from one location to another for following: i) Internal to internal memory transfer ii) Internal to internal memory exchange.
8.	Write an Embedded C menu driven program for : i) Multiply 8 bit number by 8 bit number ii) Divide 8 bit number by 8 bit number .
9.	Write an Embedded C program for sorting the numbers in ascending and descending order.
<b>GROUP C (Any 1)</b>	
10.	Write an Embedded C program to interface PIC 18FXXX with LED & blinking it using specified delay.
11.	Write an Embedded C program for Timer programming ISR based buzzer on/off.
12.	Write an Embedded C program for LCD interfacing with PIC 18FXXX.
<b>GROUP D</b>	
13.	Study of ARM processor.
Remark: Implementation of all assignments is encouraged.	

**Reference Books:**

2. Ray Duncan, "Advanced MS DOS Programming", 2nd edition, BPB Publications.
3. Mazidi, RolinMcKinlay and Danny Causey, 'PIC Microcontroller and Embedded Systems using Assembly and C for PIC18", Pearson Education.

Program:	<b>B. Tech. I.T.</b>			Semester: <b>IV</b>			
Course: <b>Data Structures and Algorithms Laboratory</b>				Code: <b>BIT4404</b>			
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Credit</b>	<b>TW</b>	<b>OR</b>	<b>PR</b>	<b>Total</b>
-	2	-	1	25	-	25	50

### Course Objectives:

1. To apply various advanced data structures such as trees and graphs to the applications.
2. To know the basics of computational complexity analysis and various algorithm design strategies.
3. To provide a thorough knowledge of the most common algorithms and data structures.
4. Design algorithms using appropriate design techniques.

### Course Outcomes:

After learning the course, the students will be able to:

1. Analyze the problem requirements and determine the most appropriate strategy to solve it
2. Measure the performance of various strategies while solving the problem
3. Solve real time problem by applying various algorithm design strategies

Assignment No.	Suggested List of Assignments (Write a program in C, any 8)
1.	Construct and expression tree from postfix/prefix expression and perform recursive and non-recursive In-order, pre-order and post-order traversals.
2.	Implement binary search tree and perform following operations: a. Insert b. Delete c. Search d. Mirror image e. Display f. Display level wise (algorithmic analysis)
3.	Implement DFS and BFS on a graph.
4.	Implement Merge Sort to sort the given list of numbers using divide-and-conquer strategy and verify the time complexity.
5.	Represent any real-world graph using adjacency list /adjacency matrix find minimum spanning tree using Prim's algorithm.
6.	Store data of students with telephone no and name in the structure using hashing function for telephone number and implement chaining with and without replacement.
7.	Develop functions to insert and delete into/from a max heap.
8	Implement Knapsack problem using Greedy approach.
9.	Write a program to implement Bellman-Ford Algorithm using Dynamic Programming and verify the time complexity.

10.	Write a recursive program to find the solution of placing n-queens on chessboard so that no two queens attack each other using Backtracking.
-----	--

Course: <b>Object Oriented Programming Laboratory</b>				Code: <b>BIT4405</b>			
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Practical</b>	<b>Tutorial</b>	<b>Credit</b>	<b>Hours</b>	<b>TW</b>	<b>OR</b>	<b>PR</b>	<b>Total</b>
4	-	2	4	50	-	25	75

**Course Objectives:**

1. To apply the concepts of object oriented paradigm.
2. To design and implement models for real life problems by using object oriented programming.
3. To develop object oriented programming skills.

**Course Outcomes:**

After learning the course, the students will be able to:

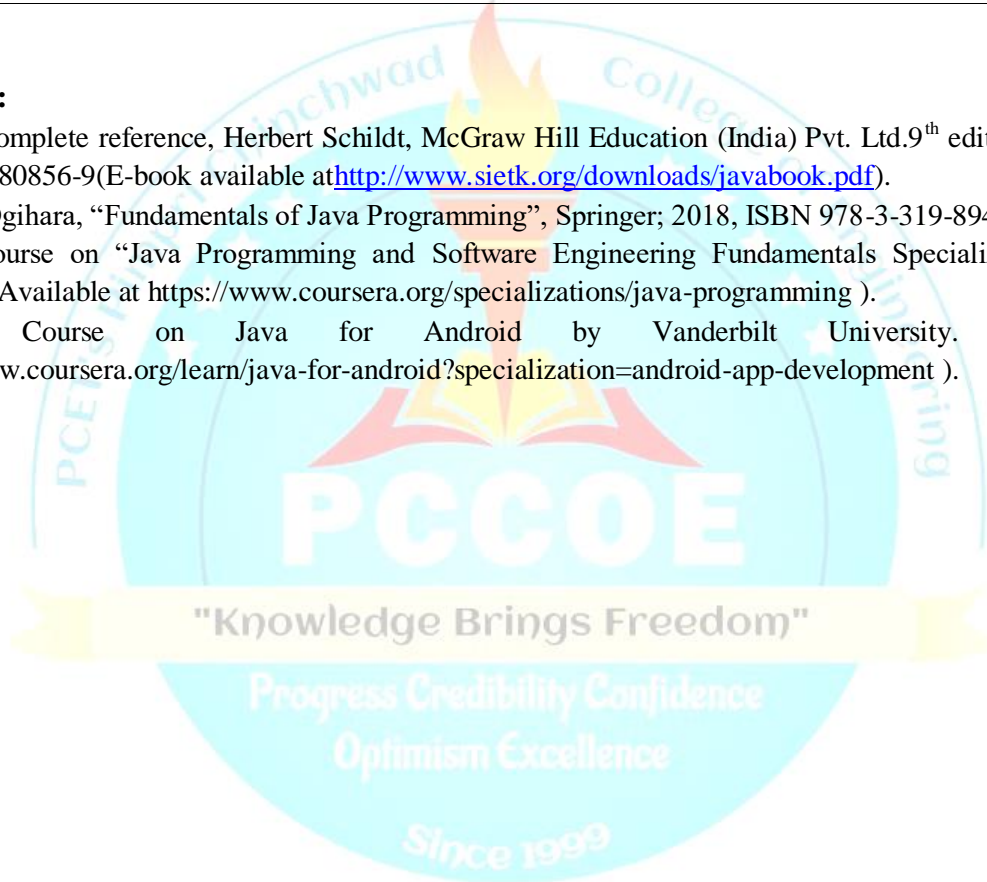

1. Explain the concept of classes to solve real life problem.
2. Design hierarchy of classes through inheritance.
3. Discover the interface and exception handling.
4. Build an object-oriented solution to solve a real-life problem.

<b>Assignment No.</b>	<b>Suggested List of Assignments</b>
1	Design a class 'Complex' with data members for real and imaginary part. Provide default and Parameterized constructors. Write a program to perform arithmetic operations of two complex numbers.
2	Design a class named weather report that holds a daily weather report with data members day_of_month, hightemp, lowtemp, amount_rain and amount_snow. Use different types of constructors to initialize the objects. Write a program to generate monthly report that displays average of each attribute.
3	Identify commonalities and differences between Publication, Book and Magazine classes. Title, Price, Copies are common instance variables and saleCopy is common method. The differences are, Bookclass has author and order_Copies(). Magazine Class has orderQty, Current_issue() and receive_issue(). Write a program to find how many copies of the given books are ordered and display the total sale of publication.
4	Design and develop inheritance for a given case study and identify objects and relationships in it. Employee class with Emp_name, Emp_id, Address, Mail_id, and Mobile_no as data members. Inherit the classes, Programmer, Assistant Professor, Associate Professor and Professor from employee class. Add Basic Pay (BP) as the member of all the inherited classes with 97% of BP, DA 10 % of BP, HRA is 12% of BP, and PF is 0.1% of BP for staff club fund. Generate pay slips for the employees with their gross and net salary.
5	Design a base class shape with two double type values and member functions to input the data and compute_area() for calculating area of figure. Derive two classes' triangle and rectangle. Make compute_area() as abstract function and redefine this function in the derived class to suit their requirements. Write a program that accepts dimensions of triangle/rectangle and display calculated area. Implement dynamic binding for given case study.
6	Design and develop a context for given case study and implement an interface for Vehicles Consider the example of vehicles like bicycle, car, and bike. All Vehicles have common functionalities such as Gear Change, Speed up and apply breaks. Make an interface and put all these common functionalities. Bicycle, Bike, Car classes should be implemented for all these functionalities in their own class in their own way.

	Design a Base class STACK and Handle runtime anomalies like Overflow when the stack is full and underflow when the stack is empty. Display error codes and messages by using appropriate try and catch block to handle the exceptions thrown
	<p><b>**** Implement a Mini Project using all the concepts of Object Oriented Programming implemented using JAVA ****</b></p> <p>The project should be built using a version control system like GitHub.</p> <p>Sample Mini Project</p> <p>Implement a Mini Project for online ticket booking system in which the customer able to book a ticket based on the availability of seats. Make the payment based on the type and number of tickets booked for the particular show. Type of tickets is Gold, Platinum, Silver. Discount will be given for booking maximum of 5 or greater number of tickets only for Gold category.</p>

### Prior Knowledge of:

1. Univariate Calculus
2. Multivariate Calculus is essential

is essential.

### Course Objectives:

This course aims at enabling students to get acquainted with,

1. Concepts and techniques of Numerical Methods to solve systems of linear equations.
2. Numerical techniques to solve differentiation, integration, ordinary and partial differential equations, and their applications.
3. Open-source software to perform numerical techniques.

### Course Outcomes:

After learning the course, the students will be able to:

1. **Understand** and perform the numerical methods to **solve** the systems of linear equations
2. **Evaluate** differentiation and integration using different Numerical methods.
3. **Understand** basic operators, packages, syntax of open-source software and **develop a program** for systems of linear equations, differentiation and Integration using.
4. **Solve** ordinary differential equations of first order using single & multistep numerical methods..
5. **Apply** explicit and implicit methods to solve the partial differential equations viz One-dimensional Heat equation, Wave equation and Laplace equations.
6. **Analyze** the solution of ODE & PDE using open-source software.

<b>Detailed Syllabus</b>		
<b>Unit</b>	<b>Description</b>	<b>Duration (Hrs)</b>
I	<b>System of linear equations:</b> Gauss elimination method by pivoting, Gauss-Jordan method, LU decomposition, Cholesky method, Relaxation method: Jacobi and Gauss-Seidel iterative methods.	7
II	<b>Numerical Integration:</b> Difference formulae for numerical differentiation, Boole's rule, Romberg integration and Gauss quadrature for double & triple integration.	8
III	<b>Problem Solving-I:</b> Solutions of systems of linear equations, Differentiation and Integration using open source software.	8
IV	<b>Ordinary differential equations:</b> Euler's method, Modified Euler's method, Runge-Kutta 4 <sup>th</sup> order methods, predictor corrector method.	7
V	<b>Partial Differential Equations:</b> Explicit and Implicit method, Stability of finite difference method, Applications of finite difference analysis in boundary value problems: one dimensional diffusion equation, Wave equation, Laplace equation.	7

VI	<b>Problem Solving-II:</b> Solutions of ordinary and partial differential equations using open source software.	8
	<b>Total</b>	<b>45</b>

### Prior Knowledge:

Linear Algebra & Univariate Calculus, Multivariate Calculus, Applied Mathematics

### Course Objectives:

This course aims at enabling students to

1. Develop a practical approach to mathematical problem solving.
2. Get familiar with many commonly used tools and techniques in numerical work.
3. Understand the different mathematical approaches for optimization.

### Course Outcomes:

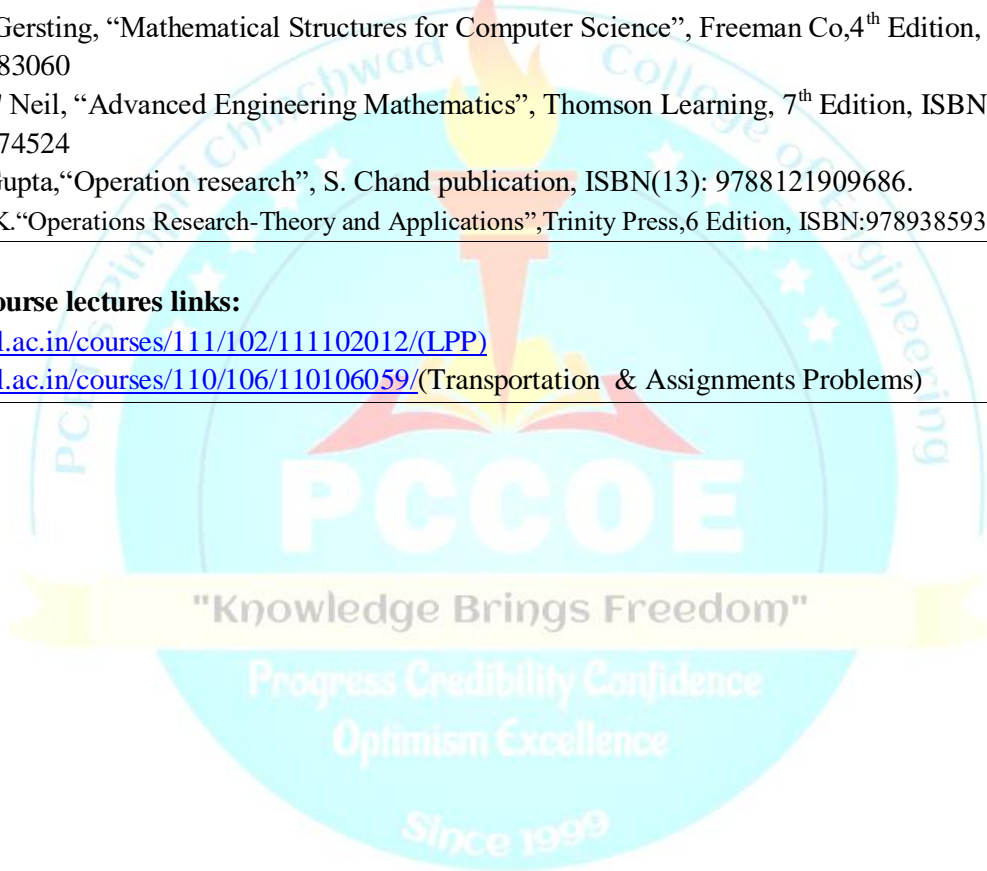

After learning the course, the students will be able to:

1. Formulate and solve linear programming models using basic theoretical principles.
2. Apply variants of Simplex methods and duality to find optimal solutions for constrained and unconstrained problems.
3. Understand basic operators, packages, syntax of software to develop programs to optimize Linear Programming Problems.
4. Solve transportation and assignment problems using optimization techniques.
5. Analyze the project network and nonlinear problems using different methods to optimize models.
6. Develop programs for transportation and assignment problems and Nonlinear Programming problems.

### Detailed Syllabus:

Unit	Description	Duration [Hrs]
<b>I</b>	<b>Linear Programming(LP)-I:</b> Introduction, formulation of Linear Programming problems, Graphical solution method, alternative or multiple optimal solutions, Unbounded solutions, Infeasible solutions, Maximization–Simplex Method,	<b>7</b>
<b>II</b>	<b>Linear Programming (LP)-II:</b> Minimization – Simplex method, Simplex Algorithm using Big-M method, Two phase method, Unrestricted variables, Degeneracy, Types of linear programming solutions.	<b>8</b>
<b>III</b>	<b>Duality:</b> Duality in linear programming, Formulation of Dual Linear programming problems. <b>Problem Solving-I:</b> Solutions of LPP using software.	<b>8</b>
<b>IV</b>	<b>Transportation Problems:</b> Introduction, Mathematical model of transportation problem, transportation algorithm, Methods of finding initial solutions: North-west Corner rule, Least cost method, VOGEL’s approximation method, Optimality of initial solution using MODI Method. <b>Assignment Problems:</b> Introduction, Mathematical model of Assignment problem, solutions to Assignment problems using Hungarian method, variations in Assignment problems	<b>7</b>
<b>V</b>	<b>Network Analysis:</b> Network diagram, Project management: PERT and CPM, Critical path analysis, Project scheduling with uncertain activity time, Project time-cost, trade- off.	<b>8</b>

<b>VI</b>	<b>Nonlinear programming:</b> Introduction, General nonlinear programming problem, Graphical solution method, Quadratic programming: Kuhn-Tucker conditions. <b>Problem Solving-II:</b> Solutions of Assignments and Transportation problems and nonlinear optimization problems using software.	<b>7</b>
	<b>Total</b>	<b>45</b>

### Prior knowledge of

- Linear Algebra & Univariate Calculus
- Multivariate Calculus.

are essential

### Course Objectives:

After completion of the course, students will have adequate background, conceptual clarity and knowledge of mathematical principles related to:

- Formulation of variational problems and analysis of key properties of system behavior.
- Construction of variational problem for multivariate functional and its solution
- Application of mathematical methods of calculus of variation to construct finite element structure for several engineering problems

### Course Outcomes:

After learning the course, the students should be able to:

- Solve variational problems to optimize constrained and unconstrained functional.
- Apply Euler-Lagrange's equation to determine stationary paths of a multivariable functional.
- Understand basic operators, packages, syntax of software to develop programs to optimize functional.
- Apply theory & techniques of calculus of variation for boundary value problems.
- Discuss finite element models for ordinary differential equations.
- Analyze the solution and FEM models of ordinary differential equations using open-source software.

### Detailed Syllabus:

Unit	Description	Duration (Hrs)
1.	<b>The foundations of calculus of variations</b> Introduction, The Euler-Lagrange differential equation, Minimal path problems, open boundary variational problems. <b>Constrained variational problems.</b> Algebraic boundary conditions, Lagrange's solution, Isoperimetric problems, Closed-loop integrals	7
2.	<b>Multivariate functional</b> Variational problems in parametric form, Functional with two independent variables, Minimal surfaces, Functional with three independent variables (only conversion). <b>Higher order derivatives</b> The Euler-Poisson equation, The Euler-Poisson system of equations, Algebraic constraints on the derivative.	8
3.	<b>Problem Solving-I:</b> Solutions of constrained and unconstrained variational problems using open source software.	8

4.	<b>Approximate methods</b> Euler's method, Rayleigh-Ritz method, Galerkin's method	7
5.	<b>Finite Element Methods</b> Boundary integral method, Finite element method, Case Studies.	8
6.	<b>Problem Solving-II:</b> Solutions of Approximate and FEM models using open source software.	7
<b>Total</b>		<b>45</b>

**Prior Knowledge of:**

1. Basic Mathematics
2. Probability

is essential.

**Course Objectives:**

The course aims at:

1. Address issues related to globalization of financial markets,
2. Development and Feasibility of financial transactions,
3. Provide the students with knowledge of a range of mathematical and computational techniques that are required for a wide range of quantitative positions in the financial sector
4. Forecasting market developments.

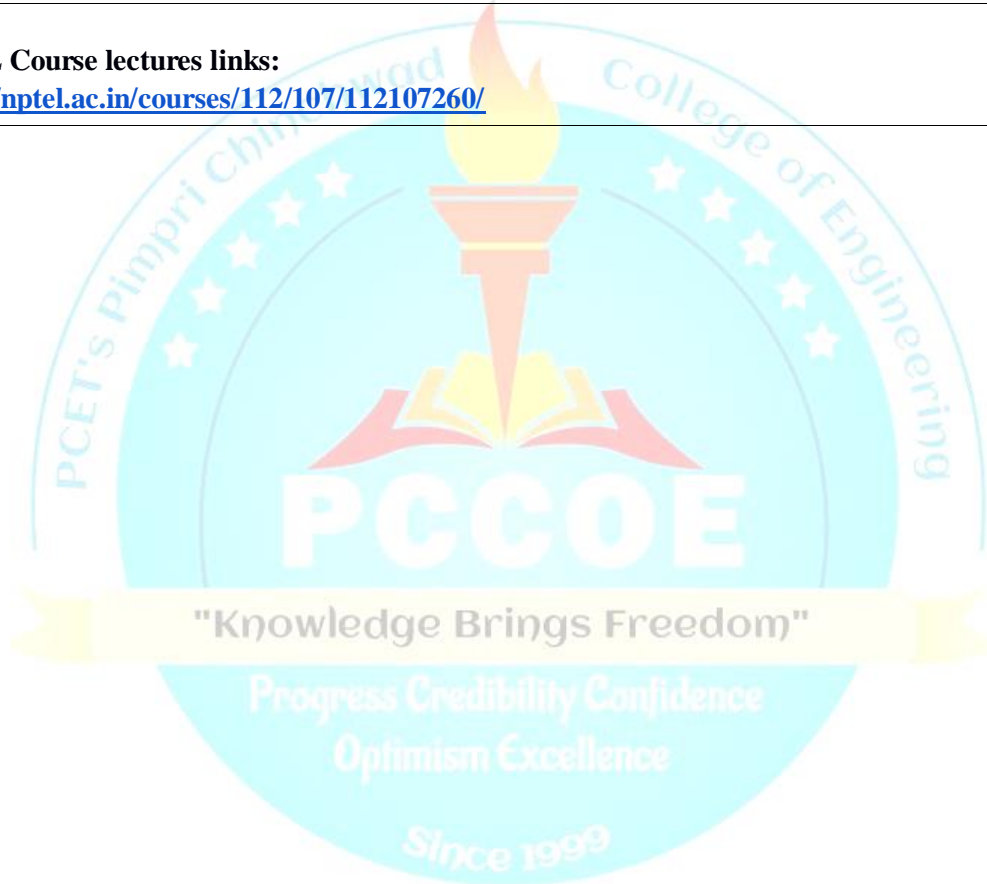

**Course Outcomes:**

After learning the course, the students will be able to:

1. Demonstrate knowledge of the fundamental concepts of financial mathematics
2. Identify various types of cash flow patterns, Compute the future value and the present value of different cash flow streams.
3. Understand types of Options and apply it to hedge against risks in existing investments.
4. Understand the characteristics of different financial assets such as money market instruments, bonds, and stocks, and how to buy and sell these assets in financial markets.
5. Describe and to analyze the investment environment, different types of investment vehicles;
6. Analyze the degree of risk for its effective management

<b>Detailed Syllabus:</b>		
<b>Unit</b>	<b>Description</b>	<b>Duration [Hrs]</b>
<b>I</b>	<b>Fundamentals of Financial Mathematics I:</b> Introduction of Financial Mathematics and its application in real life, Sources of Finance; Short term finance and Long term Funds (basics), Rate of interest, simple interest, compound interest.	<b>7</b>
<b>II</b>	<b>Fundamentals of Financial Mathematics II:</b> The time value of money, annuities and cash flows, loans, general cashflows and portfolios, derivatives, swaps, and hedging.	<b>8</b>
<b>III</b>	<b>Basics of Options :</b> Options; (call option and put options), payoffs call and put options, speculation (call or put) and its application (option).	<b>8</b>
<b>IV</b>	<b>Stocks and bonds:</b> Stocks and bonds, Valuation of stocks and bonds, Mutual funds, Cost of capital and ratio analysis.	<b>7</b>
<b>V</b>	<b>Basics of Investment:</b> Investment return. Uneven cash flows Compounding frequency of interest, Economic equivalence. Portfolio diversification	<b>7</b>

<b>VI</b>	<b>Risk &amp; uncertainty:</b> Decision under risk & uncertainty, Risk premium, Portfolio diversification, Life Insurance, Endowment	<b>8</b>
	<b>Total</b>	<b>45</b>

**Prior Knowledge:** Nil

**Course Objectives:**

This course aims at enabling students to get acquainted with,

1. Knowledge of Neural Networks and its use for controlling real time systems.
2. Knowledge about fuzzy set theory to solve various engineering problems.
3. Open-source software to perform NN toolbox and Fuzzy Logic Toolbox

**Course Outcomes:**

After learning the course, the students will be able to:

1. Understand the architecture of Neural networks and types of Neural Networks.
2. Apply backpropagation and optimizers algorithms to update weights of Neural Network.
3. Understand basic operators, packages, syntax of software and Train the neural networks using MATLAB toolbox.
4. Understand the various fuzzification and defuzzification methods.
5. Apply a fuzzy logic control system to handle uncertainty and solve engineering problems.
6. Implement a fuzzy logic toolbox in fuzzy control system.

<b>Detailed Syllabus:</b>		
<b>Unit</b>	<b>Description</b>	<b>Duration [Hrs]</b>
<b>I</b>	<b>Architecture of Neural Network:</b> Introduction, Biological neuron, Artificial neuron, Neuron modeling, Activation Function, Learning Techniques, Basic learning rules, Types of Neural Network: Single layer feed forward, Multi-layer feed forward network, Recurrent Neural Network.	<b>7</b>
<b>II</b>	<b>Neural Networks For Control:</b> Loss function, Weight initialization, Back propagation Neural Network, Optimizers algorithms, Feedback networks, Associative Memory Network and its types, Discrete time hop field networks.	<b>8</b>
<b>III</b>	<b>Problem Solving-I:</b> : Neural Network (NN) Toolbox, NN Simulink Demos, Neural Network (ANN) implementation, NN Tool Artificial Neural Network (ANN) implementation, Case studies	<b>7</b>
<b>IV</b>	<b>Fundamental of Fuzzy Logic:</b> Classical sets, Fuzzy Sets, Membership function, Cardinality of fuzzy set, Fuzzy complement, Fuzzy Composition, properties and operation on Fuzzy sets, Fuzzy Relation, Fuzzification, Defuzzification	<b>8</b>
<b>V</b>	<b>Fuzzy Logic Control:</b> Fuzzy Rule, Decision making Logic, Linguistic variables, Inferences, Fuzzy Inference system: Mamdani FIS, Sugeno FIS, Designing Fuzzy Controller, Fuzzy optimization, Introduction to generate a genetic algorithm, Applications of FIS.	<b>7</b>
<b>VI</b>	<b>Problem Solving-II:</b> Fuzzy Logic Toolbox, Fuzzy Logic Simulink Demos, Fuzzy Logic Controller (FLC) implementation, Simulink Fuzzy Logic Controller (FLC) implementation, Applications of FLC to Control System.	<b>8</b>
<b>Total</b>		<b>45</b>

**Prior knowledge of**

1. Basic Language Skills

**Course Objectives:**

This course aims at enabling students:

1. To introduce students to the fundamentals of effective communication
2. To introduce students to the skills to prepare and deliver effective presentations and learn techniques of mastering group discussions.
3. To introduce students to interview skills and corporate etiquettes
4. To introduce students to professional ethics and organizational skills

**Course Outcomes:**

After learning the course, the students will be able to

1. **Understand** the nuances of effective communication skills at the workplace.
2. **Demonstrate** presentation skills and group discussions skills to excel in the professional environment.
3. **Apply** interview skills and corporate etiquettes effectively to hone the opportunities of employability.
4. **Analyze** career management skills that can lead to improved employment.

<b>Detailed Syllabus</b>		
<b>Unit</b>	<b>Description</b>	<b>Duration (Hrs)</b>
<b>I</b>	<b>Introduction and Fundamentals of Communication:</b> Need for effective communication, Functions of Communication, Organizational Communication, Verbal-Oral and Written communication, Non-verbal communication, Barriers to Effective Communication	11
<b>II</b>	<b>Presentation Skills:</b> 4Ps (Planning, Preparation, Practice, Presentation), guidelines for developing PPT, Outlining, Effective use of A/V aids and Modes of Delivery <b>Mastering Group Discussion skills:</b> Skills evaluated in Group discussion, Types of Group discussion- Factual, Abstract, Controversial and Case studies, Do's and Don'ts in Group Discussion	12
<b>III</b>	<b>Interview Skills:</b> Interview Process, Types of Interview: Job interview, Appraisal Interview, Exit, Interview, Panel Interview; Self Introduction, Pre and Post interview activities, Skills evaluated in interview, Do's and Don'ts during Interview <b>Cover letter &amp; Resume:</b> Job Application letter, Difference between CV and Resume Writing skills, Resume writing, Writing SOPs <b>Corporate Etiquettes:</b> Dressing Etiquettes, Dining Etiquettes, Telephonic etiquette, Business card Etiquettes, Email etiquettes	11
<b>IV</b>	<b>Professional Ethics:</b> Integrity, Objectivity, Professional competence and due care, Confidentiality Professional behavior. <b>Organizational Skills:</b> Physical Organization, Digital Organization, Planning, Time management & Communication	11
<b>Total</b>		<b>45</b>

Program: <b>B. Tech. I.T.</b>				Semester : <b>IV</b>		
Course : <b>Python Programming (Proficiency Course –I)</b>				Code : <b>BIT4911</b>		
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>		
<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Credit</b>	<b>Continuous Evaluation</b>	<b>MTE</b>	<b>ETE</b>
-	2	-	-	-	-	-

**Course Objectives:**

1. To acquaint with problem solving, problem solving aspects, programming and various program design tools.
2. To develop problem solving skills with computers.
3. To develop competency for the design, coding and debugging.
4. To build the programming skills using 'Python Language'.

**Course Outcomes:**

After learning the course, the students will be able to:

1. Represent the user data using appropriate data types and variables available in python.
2. Solve a given problem using conditional statements and loops.
3. Use functions, modules and libraries to facilitate code reuse.
4. Demonstrate the string manipulation operations.

<b>Detailed Syllabus</b>		
<b>Unit</b>	<b>Description</b>	<b>Duration (Hrs)</b>
1.	<b>Problem Solving Using Computers</b> Basics of Python Programming: Features of Python, literal constants, variables and identifiers, input operation, Reserved words, Indentation, Operators and expressions.	4
2.	<b>Decision Control Statements</b> Decision control statements, selection/conditional branching statements, loop Structures/Iterative statement, selecting appropriate loop. Nested loops, the break, continue, pass, else statement used with loops. Other data types- Tuples, Lists and Dictionary.	10
3.	<b>Functions and Modules</b> Need for functions, Function: definition, call, variable scope and lifetime, the return statement. Defining functions, Lambda or anonymous function, documentation string, good programming practices. Introduction to modules and packages, Introduction to standard library modules and packages.	8
4.	<b>Strings and Operations</b> Concatenation, appending, multiplication and slicing. Strings are immutable, strings formatting operator, built in string methods and functions. Slice operation, ord() and chr() functions, in and not in operators, comparing strings, iterating strings, the string module.	8

<b>Prior Knowledge of:</b> Nil											
<b>Course Objectives:</b>											
<ol style="list-style-type: none"> <li>1. To apply principles of designing for effective user interfaces.</li> <li>2. To quickly develop high quality and interactive website.</li> </ol>											
<b>Course Outcomes:</b>											
After learning the course, the students will be able to:											
<ol style="list-style-type: none"> <li>1. Explore web programming platform using HTML.</li> <li>2. Identify HTML Tags for web page development.</li> <li>3. Apply HTML syntaxes to design forms and add effective User interface.</li> <li>4. Design Web site using HTML forms and frame for user satisfaction.</li> </ol>											
<b>Assignment No.</b>	<b>Suggested List of Assignments</b>										
1.	Using HTML5 layout tags develop informative page with sections which include various images, links to other pages for navigation, make use of all possible formatting (for example font, color etc.).										
2.	Create a registration form in HTML using HTML form input elements viz. textbox, text area, radio button and drop down menu, check box, submit, file and reset button. Field should contain name, address, birth- date, qualification, email, phone number, gender, comments, attach photo etc. Use HTML Form elements wherever required. Align all elements using table.										
3.	<p>Create a HTML programs using frames. Three frames displaying three different HTML files.</p> <ol style="list-style-type: none"> <li>i. Frame 01–contain examples of ordered as well as unordered list</li> <li>ii. Frame 02–contain examples of text formatting tags i.e. &lt;b&gt;, &lt;i&gt;, &lt;u&gt;, &lt;h1&gt;--&lt;h6&gt;, &lt;p&gt;,&lt;sup&gt;,&lt;sub&gt;</li> <li>iii. Frame 03 – contain example of 3 by 4 tables with data.</li> <li>iv. Create a hyperlink in Frame 01 that opens in Frame 03</li> </ol> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 50%;">Frame 1</td> <td style="width: 50%;">Frame 2</td> </tr> <tr> <td>Frame 3</td> <td></td> </tr> </table>							Frame 1	Frame 2	Frame 3	
Frame 1	Frame 2										
Frame 3											
4.	Apply CSS properties Border, margins, Padding, Navigation, dropdown list to page created in first assignment.										
5.	Create form in HTML with all form elements apply form validations (e.g. Email, mobile, Pin code, Password and Write program using Java script that checks the empty values from that form and alert backusing alert function										
6.	Create feedback form in PHP which contains first name, last name, address, email, comment and mobile

**Course Objectives:**

1. To learn about the social functioning and diverse culture in the country.
2. To be aware and improve interpersonal behavioral patterns.
3. To inculcate caring and serving qualities towards family, society and environment at large.

**Course Outcomes:**

After Successfully completing the course the students should be able to:

1. Apply social work practices in the context of diverse cultures.
2. Develop a broad understanding of Indian culture through various art forms.
3. Apply effective ways of interpersonal behavioral patterns eliminating their unhelpful thoughts, feelings and actions.
4. Develop skills which are necessary to initiate ideas and pursue them for holistic development of the individual.

<b>Detailed Syllabus</b>		
<b>Unit</b>	<b>Description</b>	<b>Duration (Hrs)</b>
1	<p><b>Social Welfare</b> Environment awareness such as Tree Plantation, Natural resources awareness etc, Donation Camp, Visit to Orphanage, Old Age home and Villages, Contribution in social activity like Pani Foundation, Swaccha Bharat Abhiyan, Save Girl Child/Animals/Birds/Trees etc., Activity based on societal projects / Project Exhibitions etc.</p> <p><b>Cultural Awareness</b> Divisions of Indian classical music: Hindustani and Carnatic, Dances of India, Various Dance forms: Classical and Regional, Rise of modern theatre and Indian cinema.</p> <p style="text-align: center;"><b>or</b></p> <p><b>Transaction Analysis</b> Introduction to TA, Basic Assumptions of TA, Theory of Personality Ego States, Structural and Functional, Ego States Diagnosis, Egogram, Structural Pathology, Contamination, Theory of Communication, Types of Transactions, Strokes, Stroke Economy, Theory of Life Positions, Injunctions</p>	<b>12</b>
2	<p><b>Caring and service</b> Hospital Caring, Personal Safety, First Aid, Disaster Management Gardening, Organic farming, Cooking, etc</p>	<b>12</b>

**Prior Knowledge : NIL**

**Course Objectives:**

1. To gain an understanding on the concepts and strategies related to sustainable development and identify and analyze various conservation methods for renewable and non-renewable resources.
2. To examine biotic and abiotic factors within an ecosystem and to identify energy flow in ecosystem.
3. To understand the value of biodiversity and identify current efforts for its conservation at national and local level
4. To provide comprehensive overview of environmental pollution and technology associated with monitoring and control.

**Course Outcomes:**

After completing the course, the students will be able to:

1. Demonstrate an integrative approach to environmental issues with a focus on sustainability and identify the role of organism in energy transfer in different ecosystem.
2. Distinguish between renewable and non-renewable resources and analyze consumption of resources
3. Identify key threats to biodiversity and develop appropriate policy options for its conservation.
4. Analyze the impact of environmental pollution and the science behind those problems and potential solutions.

<b>Detailed Syllabus</b>		
<b>Unit</b>	<b>Description</b>	<b>Duration (Hrs)</b>
1	Multidisciplinary nature of environmental studies: Definition, scope and importance, Need for Public awareness, Natural Resources: Renewable and non-renewable resources: Natural resources and associated problems a) Forest b)Water c)Mineral d)Food e) Land f) Energy, Role of an individual in conservation of natural resources, Use of resources for sustainable lifestyle.	3
2	Ecosystems: Concept of an ecosystem, Structure and function of an ecosystem, Producers, consumers and decomposer, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids, Characteristic features, Case study on Forest ecosystem, Aquatic ecosystem.	3
3	Biodiversity and its conservation: Introduction – Definition: genetic, species and ecosystem diversity, Biogeographically classification of India, Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic values, Biodiversity at global, national and local levels, India as a mega-diversity nation, Hotspots of biodiversity, Threats to biodiversity, Conservation of biodiversity, Case study on any oneHotspot of biodiversity.	3

4	Environmental Pollution: Definition, Cause, effects and control measures of different pollution: a. Air b. Water c. Soil d. Noise e. Thermal f. Nuclear hazards, Solid waste management, Relevance of environmental ethics for environmental protection, Social Issues and the Environment: From Unsustainable to Sustainable development ,Urban problems related to energy ,Water conservation, Impact of Climate change, Innovative ideas for creating public environmental awareness.	3
